Maintenance For Shower

Metal wall tile can add a wonderful accent to any room. They're as easy to put up as ceramic tiles and in most cases, they are quite easy to maintain as well. This doesn't mean they are maintenance free, however. Like everything else in your home, they need to be cleaned and cared for.

Step 1 - Cleaning the Tile

Most of the tiles can be cleaned with warm water. Wash down with a micro fiber cloth and rinse thoroughly so no streaks show on the tile.

Step 2 - Removing hair or debris from the drain outlet

It's possible that you could end up with hair and debris in the hair catcher. Periodically remove the grate and clean hair catcher. Also clean the metal surface with warm water and soft cloth before reinstalling hair catcher and stainless stee grate.
