

How To Plant And Care For Your

1 PREP

Choose a container with drainage holes and a tray. Once you've selected a pot, put potting soil in the bottom of the pot. If you're planting Citrus or Avocado Trees, use a Citrus or Cactus mix for better drainage.

2 PLACE

Remove your plant from its shipped container and place it in the pot. The soil line should be about an inch below the top of your pot.

3 FILL

Add additional potting soil around the pot's edges and compact gently to eliminate air pockets.

4 WATER

Water your plant slowly, until you see it flowing from the holes at the bottom of your pot. Avoid letting your plant sit in the drained water, and only water again when the top of the soil is dry to the touch.
