

DO-IT-YOURSELF MOLD TEST KIT

DO-IT-YOURSELF MOLD TEST KIT

3 TEST METHODS

Choose one of three easy test methods to identify the presence of mold in just 24-48 hours.

1 INDOOR AIR

To test for the presence of airborne mold, place prepared petri dish in the open air for one hour.

2 SURFACES

To test a surface for suspected mold, easily collect a sample and deposit it in the prepared petri dish using the enclosed swabs.

3 HVAC VENTS

To test HVAC vents, the prepared petri dish is taped to a vent, allowing forced air to hit the inside of the dish for 10 minutes.

Detailed instructions for use are enclosed.

Note: Only one testing method can be used per kit.

INCLUDED IN THIS KIT:

One
Petri Dish

Two
Sterile Swabs

One Bottle of
Mold Growth
Solution

One Prepaid
Envelope for

DO-IT-YOURSELF MOLD TEST KIT

Note: While Home Armor Mold Test Kit can be an important part of assessing your family's potential exposure to mold, many factors contribute to any test's effectiveness. The Mold Test Kit can only detect airborne or surface mold spores (depending on the test method) that are present at the time of testing. If symptoms of mold exposure persist, a certified mold specialist should be consulted.
