

## Fiberglass Raspberry Trellis

There are usually three ways to stake raspberries, hedgerow trellis systems, raspberry trellis and V trellis systems. However, raspberry system is most suitable, although may have some cost increase in stake purchasing, but it does make a better harvest, because this system can give raspberry more light and more air and its steady structures successfully give their healthy growing great support.

It is also very ideal for staking or trellising blueberry, blackberry, kiwi fruit and grape vines.

### Installation Instruction

DIY Kits Package:

① Get the post and the long cross bar, place the cross bar on the back of the post (refer to above photo), match two holes in the middle of cross bar with two holes in the top of the post. Insert the bolt, then reverse the post to expose the other end of the bolt, insert the washer into bolt, then fasten the screw. Do the same to each hole.

② Get the short cross bar, connect the cross bar by screwing the two holes with holes in the middle of post, in the same way as step 1. Notice: when connecting the cross bar, the side of cross bar with slot should be on top. Like the picture shown.

③ Now you already get raspberry trellis. Ready to go? Dig a hole and bury the sharp end of the post, or hammer the sharp end into soil if the soil is soft.

④ If you buy two trellises or more, stretch the wires through the slots of the cross bars of two trellises. Then everything is done.
