

ANTENNAS DIRECT® DB4e

Bowtie antennas have been popular for over 60 years. While they offered an acceptable combination of power and size, they were designed for a different era. The DB4e utilizes the latest advancements from the Antennas Direct design lab. The breakthrough technology of the enhanced series of bowtie antennas is smaller and more powerful. While it delivers twice the power of the bowties it replaces, the DB4e also specifically targets the core UHF DTV frequencies. We have also enhanced this antenna's ability to reject interference. At a compact 23" x 37" form, the DB4e is the first broad spectrum antenna without the performance compromises typically seen in outdated designs of legacy antennas. With a generous beam width of 60 degrees, the DB4e offers reliable reception from widely spaced broadcast towers without the need for rotation.

It has a range of 60+ miles making it the ideal antenna choice for suburban installations challenged with receiving signals through heavy foliage or roofing materials. Using anodized aluminum, DB4e antennas are engineered for strength and durability. The Antennas Direct Lifetime Warranty assures you of its superior build quality.

DB4e

- SKU# - DB4-E
- Description: Enhanced DB4 Multi-Directional "Bowtie" UHF Antenna
- Range: Up to 60+ miles
- Beam width: (HorizontalPlane) 60 degrees
- Gain: Max 15.8 dBi
- VSWR: Typical 2.1 or better
- Front to back ratio: Max 20.3 dB
- Size assembled 37.5"L x 23.25"W x 4.5"D
- Lifetime Warranty
- MSRP - \$119.99
