Walls + ceilings
Do not use on floors

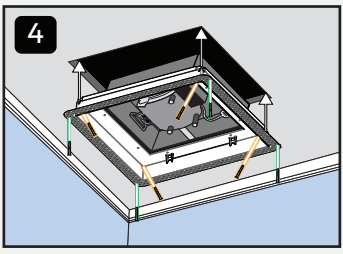

Measure fan to ensure fit. If fan is smaller than the opening of **Framed Exhaust Mount**, use plywood as an adapter to increase flange size.

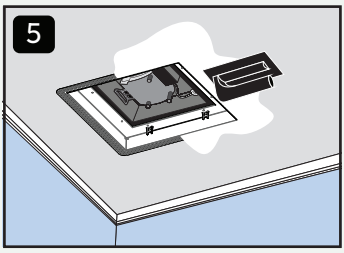

Disengage **plate**.

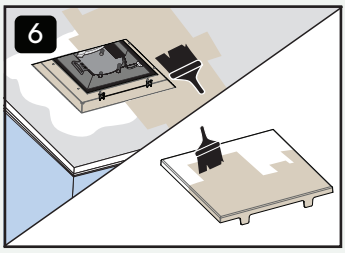

Fasten fan to **Exhaust Mount**. Secure with screws.

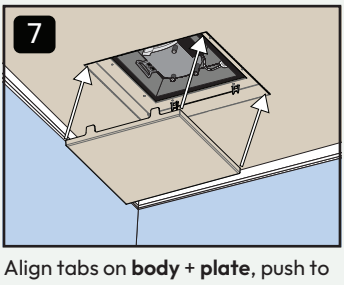

Dry fit **body** into opening. Secure corners to ceiling frame using included screws. Add drywall screws on bead as neccessary.

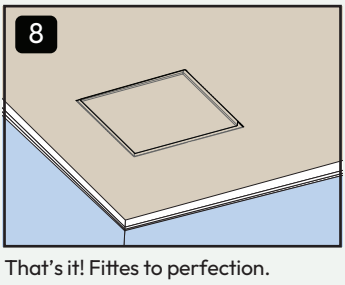

Use mud to cover flange surface. Wait to dry. Sand so surface transitions smoothly. Repeat step as needed.

Paint or wallpaper inside of **body** + **plate** to match surrounding walls. Do not paint fan.

Align tabs on **body** + **plate**, push to snap into place.

That's it! Fittes to perfection.
