

QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE	Full to part sun.
USDA HARDINESS ZONES	5 to 9.
PLANT TYPE	Perennial.
PLANTING DISTANCE IN-GROUND	At least 4 feet apart.
CONTAINER SIZE	One plant per 12-inch or larger container.
MATURE HEIGHT / SPREAD	<p>3-N-1: 4 to 5 feet tall with a similar spread.</p> <p>Black Knight: 6 to 8 feet tall with a 4 to 6 foot spread.</p> <p>Honeycomb: 5 to 10 feet tall with a 4 to 8 foot spread.</p> <p>Lochinch: 4 to 5 feet tall with a similar spread.</p> <p>Nanho Purple: 5 to 6 feet tall with a 3 to 4 foot spread.</p> <p>Pink Delight: 5 to 7 feet tall with a similar spread.</p> <p>Royal Red: 4 to 5 feet tall with a similar spread.</p> <p>White Profusion: 5 to 10 feet tall with a similar spread.</p>
BLOOM TIME	Summer to fall.
TIME TO REACH MATURITY	24 months.
FACTS OF NOTE	<p>Attracts butterflies and hummingbirds.</p> <p>Fragrant blooms.</p> <p>Deer and rabbit resistant.</p>

Thank you for your order!

Butterfly bushes deliver bright, reliable color all season long! With long flower spikes and a sweet, honey-like scent, these classic shrubs imbue the landscape with beauty and fragrance. A must-have for butterfly gardens, butterfly bushes are excellent in sunny beds, borders, or containers. These exceptional shrubs make a colorful impression no matter where they are planted!

Caution: Do not assume any plant is safe to eat. Only parts of plants expressly grown to be eaten should be considered edible. As with any product that is not food, care should be taken to make sure that small children and pets do not ingest any part of the plant that is not expressly grown to be eaten.

Unless specifically stated, this product is intended for ornamental horticultural use only and is not intended for consumption or ingestion by humans or pets. Most plants are harmless, but some contain toxic substances which can cause adverse health effects. Furthermore, some individuals and some animals are sensitive or allergic to certain plants and precautions should be taken to limit or avoid physical contact with particular plants. Some plants have thorns or spines that can be painful if handled.

**In case of ingestion contact a poison control center immediately.

BUTTERFLY BUSHES

*Image on cover is representative of the type of plant(s) in this offer and not necessarily indicative of actual size or color for the included variety.

OUT OF THE BOX

BUTTERFLY BUSHES

Your plants have been shipped to you in pots. We urge you to remove them from the shipping box and plant them as soon as possible. Should planting be delayed due to weather or other unforeseen circumstances, roll the plastic bag down around each plant and place them near a bright window or other sunny location. Keep them well-watered in their pots until permanently planted. Once planted, they begin setting roots and, as the weather warms, begin showing new growth. Please plant as soon as possible, provide reasonable care and be patient. The foliage on potted plants may appear slightly wilted or yellow upon arrival. This is due to the stress of shipping and is usually nothing to worry about. Water the plant thoroughly, place it in a shady location and remove any foliage that does not recover.

SHIPPED AS SHOWN

PLANTING INSTRUCTIONS

Important: Thoroughly hydrate the plant by submersing the root zone in a container of water for 10 minutes while you prepare for planting.

1. Remove and discard the clear plastic bag from around the pot.
2. After watering, remove the pot by holding the plant upside down in one hand and squeezing the sides of the pot with the other.
3. Prepare the root ball for planting by gently disturbing the surface roots with your fingers, fork, or gardening tool and pruning any damaged roots. This will encourage the roots to begin growing outward into the new soil.

PLANTING INSTRUCTIONS (Continued)

4. Dig a hole twice as deep and twice as wide as the plant's root ball. Partially backfill the hole with soil and place the plant into the hole. The top of the root ball should be level with the ground surrounding the hole. Refill the hole with soil, firming the soil around the plant with your fingers. Check to be sure the plant is not planted too deeply. If it is, raise the plant carefully and re-firm the soil.

5. Water thoroughly.

CONTINUING CARE

WATERING	<p>Adequate and consistent watering is essential during your plant's first year in the garden. Infrequent, long soakings of water that thoroughly saturate the soil are more effective than frequent, light applications of water.</p> <p>Due to variable geographical and environmental conditions, a specific watering schedule is difficult to define. However, as a rule of thumb, you should not allow the soil or the original root ball to completely dry out. During the first summer, you may need to water as often as every few days in periods of drought and extreme summer heat. To determine if your plant needs water, dig a few inches into the soil next to the plant. If the soil is dry 2-3 inches below the surface, it is time to water.</p> <p>Overwatering can be as damaging as under watering. Be sure that the area surrounding your plant has adequate drainage to move water away from the plant. If you choose to plant in a container, always select one with drainage holes to prevent your plant's roots from sitting in water.</p>
MULCHING	<p>Apply a 2-4 inch layer of shredded bark, compost, leaves, straw or other organic matter around your plants to promote moisture retention, maintain even soil temperatures and discourage weed growth. Replenish the mulch as needed.</p>
WEEDING	<p>Keep the area around your plants free of weeds. Weeds compete with surrounding plants for food, water and light. Walk around the garden periodically and pull weeds, including the roots, as soon as you see them.</p>

CONTINUING CARE (Continued)

FEEDING	<p>Feed your plants once every 2-3 weeks during the growing season with a water-soluble fertilizer. Discontinue feeding after September 1st so your plants can harden off for winter dormancy. Resume fertilizing when new growth appears in spring.</p>
PRUNING	<p>Remove spent flowers as blooms fade to encourage continuous flowering. Trim any dead or weak growth as needed to maintain an attractive appearance.</p> <p>In mild areas, butterfly bushes may be pruned after they have gone dormant in late fall or before new growth begins in early spring. Remove any dead or damaged growth and prune as desired to re-shape the plant.</p> <p>In cold areas, butterfly bushes will die back over the winter. In late fall, winter or early spring, cut them back to the ground. New growth will emerge from the roots as spring temperatures rise.</p>
WINTERIZING	<p>Watering thoroughly in late fall will greatly enhance your plant's cold tolerance once the ground has frozen.</p> <p>Butterfly bushes are winter hardy, but will benefit from mulching in cold areas. The time to winterize them is in late fall. When winterizing perennials, keep in mind that the root system is the most vulnerable to cold damage. Mulch heavily by mounding a 6-8 inch layer of shredded bark, compost, leaves, straw or other organic material around the base of each plant.</p> <p>In very cold areas, containerized plants can be brought into an unheated, protected area such as a garage or cellar before temperatures drop below freezing. Check soil moisture every 2-3 weeks and water as needed during winter.</p> <p>In spring, remove mulch from in-ground plantings. Containerized plants should be moved back out into the garden sunlight where they will begin to repeat their yearly garden performance. Butterfly bushes tend to break dormancy later in the spring than other plants, so do not be alarmed if they do not begin growing right away.</p>
