

Use and Care M A N U A L

FURNITURE CARE GUIDE

Furniture plays an essential role in any interior design. The evolution of furniture from their basic utility to them being a luxury symbol and their beautiful designs are taking a leap in today's world. There are such a significant number of furniture styles that it is extremely difficult to settle on a correct decision that will fit your home flawlessly. Your home is supposed to be solace and contributes a healthier lifestyle, both mentally, emotionally and physically. We need furniture for our comfortable lives, for storage, sitting on hold and for relaxation.

Buying furniture without plan may affect your decoration and overwhelming of the space. Choosing the right one for your home or office not only improve the beauty of your home but keeps your stress away as well.

Cleaning Tips

WOOD

It's pretty rare to walk into a house and not find a stick of wood furniture inside. Wooden pieces add a cozy touch to a home, with their rich grains and sturdy designs. To keep the wood looking its best, it needs to be cleaned properly. Learn how to clean the furniture better maintain its sheen and to prolong its

Lifespan. Cleaning wood isn't hard with the proper cleaning supplies like wood-specific cleaners, detergent, wax, and even homemade solutions.

While it might seem complicated to clean wood, a simple approach is always best. For starters, when purchasing new wood furniture, always ask the vendor for tips on how to care for the piece. Because every finish, stain, and type of wood is different. It's hard to have a one-size-fits-all approach to cleaning wood furniture, but for a good rule of thumb is to start with the mildest cleaning solutions first and work your way up from there. You'll also always

wants to test new cleansers or products in an inconspicuous spot before wiping down a whole table or chair.

METAL

Wrought iron and stainless steel are popular choices for outdoor furniture for their durability and ease of maintenance. In most cases, metal patio furniture will easily return to "like new" condition by using a sponge or brush to clean surfaces with a quarter cup of mild dish soap added to a gallon of warm water.

Metal furniture is best cleaned with a cloth or sponge using water and mild, non-detergent soap and wiped dry. Abrasive scrubbers or cleaners should not be used as they can scratch the finish, potentially exposing the metal to rust-inducing moisture

The greatest enemy of metal furniture is rust. Although metal patio furniture is often painted or coated with a rust-resistant finish, these will wear away over time. If rust is detected, use steel wool to remove oxidation and consider re-painting the furniture to prevent future problems.

MDF (MEDIUM DENSITY FIREBOARD)

Although powder-coated MDF is a durable, seamless surface, it is not completely impervious to stains and damage from moisture or heat. Simply take the same precautions you would with any wood furniture. Avoid dragging sharp or rough objects across the surface of your furniture. Use adhesive felt pads, trivets, coasters and placemats to help prevent scratches. Use a slightly damp cloth to clean as needed. For spot cleaning, use an all-purpose cleaner or a solution of water and mild detergent. Wipe Dry

STEEL

Steel, also known as inox, is an alloy that does not readily rust nor wear with excessive cleaning. However, all grades of steel will stain and discolor without proper maintenance and cleaning. Although they are not hard to maintain, steel furniture requires a little cleaning and maintaining to keep them shining and functioning well. If not properly cleaned, they can develop rust that is going to inhibit their functionality. Steel is superior to other metals because it contains other metals such as nickel and chromium that prevents it from easy corrosion. However, galvanized

steel should not be confused with stainless steel. Galvanized steel is steel that has been coated with a layer of zinc.

The first step in cleaning is removing any physical item that may be laying on the surface you are about to clean. The surface should be free of any items, especially those items that can be damaged while performing cleaning.

After you wipe any dirt or debris on the surface, gather the items that you are going to use while cleaning. Non-abrasive cleaning rags are preferred because they don't leave any residue lint. Paper towels can

also be used, but they tend to leave some lint that is visible when the furniture dries.

Dish soap is the best agent for cleaning grime on steel surfaces. Most steel restaurant furniture is contaminated by grime that comes from the food that the restaurant serves. Dish soap is good at breaking the bond between the steel surface and oil that may settle there.

To clean it, put some dish soap on your rag and add a little water on it to moisten it. Wipe over the surface that you are cleaning. If there is a stubborn stain or an oil deposit, you may have to go over the stain several times to disintegrate and remove it.

After you finish wiping, rinse the rag and wipe over any remnants of the cleaning solution or moisture from the surface of the furniture. After it has dried, drop a few drops of mineral or baby oil on a dry rag. Rub the rag against the item until it is properly polished
