

Installation Guide: **Straight Hi-Flow** section

What is the **Straight Hi-Flow** section?

The **Straight Hi-Flow** section is a heavy use gutter guard section for use with **BEST-1** Gutter Guards. The design handles high water flow conditions that are caused by roof areas like around dormers, around roof chimneys, downspouts on roofs, and straight roof valleys. The Straight Hi-Flow section comes in gray aluminum frame with a stainless steel screen that matches the BEST-1 Gutter Guard, fully assembled, and fits up to a 6 inch gutter.

2 Install Methods:

- ✓ **Fascia Mount** – Attaches securely to the back of the gutter, trim to fit installation to fit most gutters.
- ✓ **Under Shingle Mount** - Fits under the roof shingle, easy install, and does not void any roof warranty*

How it Works:

1. Straight Section slows the water down using the Raised Ridges built into the screen.
2. Straight Section has a larger & stronger 24 mesh Stainless Steel screen to allow for faster water absorption.
3. The Raised Screen keeps debris lifted up to be blown off, while only water runs into gutter.

These features work together to make the **Straight Hi-Flow** section the best solution for high water flow areas.

Straight Hi-Flow section is easy to clean with either a brush or leaf blower if needed.

Installation Overview:

Step 1: Prepare area, trim edges to fit

Step 2: Under Shingle or Fascia Mount

Step 3: Install Gutter Guard on both sides

Install Notes:

Fascia Mount: Clean and seal gutters, place the section over gutter area and mark to trim to fit, leave 1/2" longer to allow bend up of rear screen in order to screw to fascia and secure, mount front of section to gutter lip, install gutter guard on both sides.

Under Shingle Mount: Clean and seal gutters, gently lift roof area, cut corners on the section, slide under the roof shingle but place it on top of the roof moisture tar paper, mount front of section to gutter lip, install gutter guard on both sides.

**when correctly installed, see website for details and detailed installation notes (www.best1gutterguards.com)*
