

Current Utilization and Project Ideas

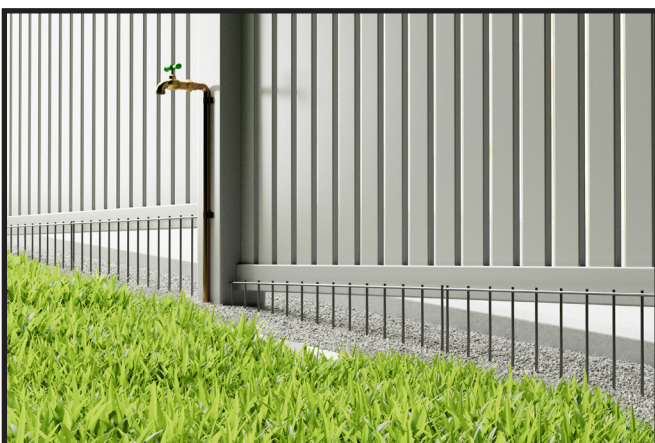

Chainlink Fencing

Use Dig Defence units to “tie” chain link fencing to the ground by interlocking the bottom links during installation. Therefore keeping animals from pushing or digging under to enter or leave. As we like to say, extend the protection of your fence underground.

Wood Privacy Fencing

Close gaps under that privacy fence to keep animals from squeezing under or starting a hole for escapes. Keep your wood planks from sitting on the ground, allowing a longer life for your fence. Dig Defence is an added protection to any wood fence.

Decorative Fencing (Vinyl, Wrought Iron, Etc)

Most, if not all, decorative fencing is installed with a gap purposely placed at the bottom of the fence. Might as well have a sign welcoming all animals to go under it. Stop the Dig and correct the gap with Dig Defence.

Current Utilization and Project Ideas

Repair Large Gaps On Any Fence

In addition to the preventative protection on current fencing from the above models, Dig Defence offers the XL model that provides immediate protection for “favorite” digging spots. Secure those areas that are constantly being attacked by pets or pests.

Above Ground Structures

Not only can you extend the fence’s protection underground, Dig Defence units can extend protection for above ground structures. Such as but not limited to: Decks, Sheds, Mobile Homes, Chicken Coops, etc.

Currently protecting against, but not limited to...

- Pets - dogs, etc.
- Pests - wild boar hogs, javelinas, large iguanas, tortoises
- Predators - coyotes, alligators, wild dogs
