

installation instructions:

URETHANE SHELF

SAFETY INSTRUCTIONS

Make sure to use the correct tools recommended.

Wear safety goggles.

Follow adhesive, power tools, and paint manufacturers' instructions and users manuals.

Use common sense and follow good construction practices.

TOOL & MATERIAL CHECKLIST

- screw driver
- electric drill
- level
- pencil

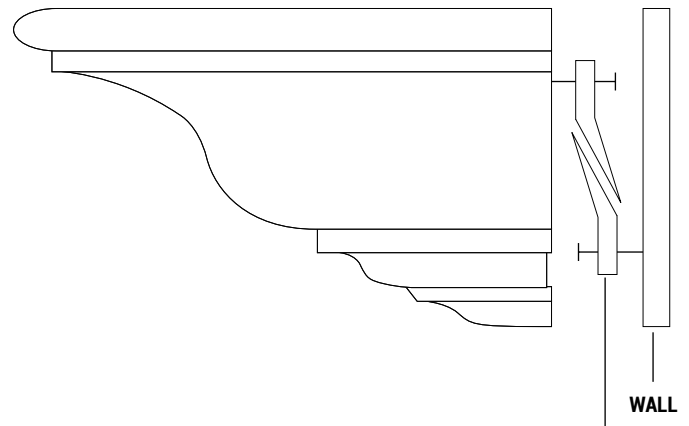

IMPORTANT INFO

- It is highly recommended that you paint or finish the shelf with 100% acrylic latex paint before installing.
- Once installed, you can apply any necessary touch-up paint or finish.
- For best results, we recommend installing the metal strip into studs for a more secure hold.
- ***Not all urethane shelves include hardware. Purchase claw tooth, keyhole, or other shelf bracket separately to install correctly.**

INSTALL INSTRUCTIONS:

1. Position the shelf on the wall and mark the placement with a pencil using the top line of the shelf.
2. Measure the metal strip 1 to 1 1/4" below your pencil mark. Use the wall anchors and screws to secure the metal strip (piece not attached to the shelf) to the wall. Make sure your installed metal strip is level.
3. The shelf is affixed to the wall by positioning the shelf over the metal strip sliding it down. The shelf bracket and metal strip will interlock holding the shelf firmly to the wall.
