1.6 CU. FT. WASHING MACHINE

Lavadora portátil de 1.6 pies cúbicos
Safety and Precautions

This manual contains important information on the installation, use, and care of your appliance. Please read this manual carefully before installation and operation of this machine to prevent injury and property damage.

WHAT YOU NEED TO KNOW ABOUT SAFETY INSTRUCTIONS

Warnings and Important Safety Instructions in this manual DO NOT cover all possible conditions and situations that may occur. It is your responsibility to use common sense, caution and care when installing, maintaining and operating your washer.

IMPORTANT SAFETY SYMBOLS AND PRECAUTIONS

⚠️ WARNING
This indicates that hazards or unsafe practices may cause serious personal injury or death.

⚠️ CAUTION
This indicates that hazards or unsafe practices may cause minor personal injury or property damage.

⚠️ This graphic represents CAUTION ATTENTION, and detailed cautions will be displayed in side the graphic.

🚫 This graphic represents OPERATION PROHIBITED, and detailed prohibitive items will be displayed in side the graphic.

🚫 This graphic represents FORBIDDEN EXECUTION, and detailed forbidden execution items will be displayed inside the graphic.

State of California Proposition 65 Warnings:

⚠️ WARNING: This product can expose you to chemicals including: benzene, formaldehyde, and carbon monoxide which are known to the State of California to cause Cancer and Reproductive harm. For more information, go to www.P65Warnings.ca.gov.
Safety and Precautions

Important Safety Instructions

Warning-to reduce the risk of fire, electric shock, or injury to persons when using your appliance, follow basic precautions, including the following:

1. Read all instructions before using the appliance.
2. Use this appliance only for its intended purpose as described in this owner's Manual.
3. Before use, the washer must be properly installed as described in this manual.
4. ALWAYS follow the fabric care instructions supplied by the garment manufacturer.
5. Do not wash or dry articles that have been previously cleaned in, soaked in, or spotted with gasoline, dry-cleaning solvents, other flammable or explosive substances as they give off vapors that could ignite or explode.
6. Do not allow children to play on or in the appliance. Close supervision of children is necessary when the appliance is used near children.
7. Before the appliance is removed from service or discarded, remove the lid of the washing or drying compartment.
8. Do not reach into the appliance if the basket is moving.
9. Do not install or store this appliance where it will be exposed to the weather or freezing temperatures.
10. Do not tamper with the controls.
11. Do not repair or replace any part of the appliance or attempt any servicing unless it is specifically recommended in the user-maintenance instructions or in published user-repair instructions that you understand and have the skills to carry out.
12. Do not add gasoline, dry-cleaning solvents, or other flammable or explosive substances to the wash water. These substances give off vapors that could ignite or explode.
13. Under certain conditions, hydrogen gas may be produced in a hot water system that has not been used for 2 weeks or more.
14. HYDROGEN GAS IS EXPLOSIVE. If the hot water system has not been used for 2 weeks or more, before using a washer or combination washer-dryer, turn on all hot water faucets and let the water flow from each for several minutes. This will release any accumulated hydrogen gas. As the gas is flammable, do not smoke or use an open flame during this time.
15. Keep the area underneath and around your appliances free of combustible materials (lint, paper, rags, etc.), gasoline, chemicals and other flammable vapors and liquids.
16. Do not place items exposed to cooking oil in your washer. Items contaminated with cooking oils may contribute to a chemical reaction that could cause a load to catch fire.
17. This washer is not designed for maritime use or for mobile installations such as in RVs, aircraft, etc.
18. Turn off the water faucets and unplug the washer if the machine is to be left for an extended period of time, such as during vacations.
19. Packaging material can be dangerous for children. There is a risk of suffocation! Keep all packaging away from children.
20. Always check the inside of the washer for foreign objects before loading laundry. Keep the lid closed when not in use.

---

Installation Warnings and Precautions

1. Plug the power cord into an AC 120V/60Hz wall socket rated at 15amps or higher. Use the socket for this washer only.
2. Do not use an extension cord.
3. Do not install this appliance in a humid, oily, or dusty location, or in a location exposed to direct sunlight or water (rain drops).
4. If the washer is moved to a new location, have it checked and re-installed by a qualified service technician.
5. Plug the power plug into the wall socket firmly. Do not use a damaged power plug or a loose wall socket.
6. Do not pull or excessively bend the power cord.
7. Do not twist or tie the power cord.
8. Do not hook the power cord over a metal object, place a heavy object on the power cord, insert the power cord between objects, or push the power cord into the space behind the appliance.
9. Do not install this appliance near a heater or inflammable material.
10. Do not install this appliance in a humid, oily, or dusty location, or in a location exposed to direct sunlight or water (rain drops).
11. Do not install this appliance in a location where gas may leak.
12. Do not install this appliance in a location exposed to direct sunlight or water (rain drops).
13. Do not install this appliance in a location where gas may leak.
14. Do not install this appliance in a location exposed to direct sunlight or water (rain drops).
15. Do not install this appliance in a location exposed to direct sunlight or water (rain drops).
Safety and Precautions

Installation Warnings and Precautions

1. Do not install on carpet. Install washer on a level and solid floor that can support its weight.
   - Failing to do so may result in abnormal vibrations, noise, or problems with the product.
2. The washer is heavy. Two or more people may be needed to install and move the appliance.
   - Failing to do so may result in bodily or other injuries.
3. Store and install the washer where it will not be exposed to temperatures below freezing or exposed to outdoor weather conditions.
   - Failing to do so may result in serious leak damage.
4. Position the appliance so that the power plug is easily accessible.
   - Failing to do so may result in electric shock or fire due to electric leakage.
5. To reduce the risk of injury to persons, adhere to all industry recommended safety glasses.
   - Failing to follow all of the safety warnings in this manual may result in property damage, or injury to persons.

Usage and Maintenance Warnings and Precautions

1. If the appliance is flooded, cut the power immediately and contact your nearest service center.
2. If the appliance emits a strange noise, a burning smell, or smoke, unplug the power plug immediately and contact your nearest service center.
   - Failing to do so may result in electric shock or fire.
3. In the event of a gas leak (such as propane gas, LP gas, etc.), ventilate the area immediately. Do not turn any appliance or light on or off.
   - Do not use a ventilating fan.
4. A spark may result in an explosion or fire.
5. Do not wash items contaminated with gasoline, kerosene, benzene, paint thinner, alcohol, dry cleaning detergent or other flammable or explosive substances.
   - This may result in electric shock, fire, or an explosion.
6. Do not force the washer lid open while the washer is operating (high-temperature washing / drying / spinning).
   - Water flowing out of the washer may cause burns or cause the floor to be slippery. This may result in injury.
7. Make sure to remove the packaging (sponge, styrofoam) attached to the bottom of the washer before using it.
8. Do not insert your hand or a metal object under the washer.
   - This may result in injury.
9. Do not attempt to operate this appliance if it is damaged, malfunctioning, partially disassembled, or has missing or broken parts, including a damaged cord or plug.
   - This may result in electric shock, fire or death.
10. Do not touch the power plug with wet hands.
    - This may result in electric shock.
11. Do not turn the appliance off by unplugging the power plug while the washer is in operation.
    - Plugging the power plug into the wall socket again may cause a spark and result in electric shock or fire.
12. Keep all packaging material well out of the reach of children, as packaging materials can be dangerous to children.
    - If a child places a bag over its head, it may suffocate.

Usage and Maintenance Warnings and Precautions

1. Do not let children or infirm persons use this washer unsupervised.
   - Failing to do so may result in electric shock, burns or injury.
2. Do not attempt to repair, disassemble, or modify the appliance yourself.
   - Do not use any fuse (such as cooper, steel wire, etc.) other than the standard fuse.
3. If you need to repair or reinstall the appliance, contact your nearest service center.
   - Failing to do so may result in electric shock, fire, problems with the product, or injury.
4. If any foreign substance such as water enters the appliance in any area other than the tub, unplug the power plug and contact your nearest service center.
   - Failing to do so may result in electric shock or fire.
5. If the water supply hose comes loose from the faucet and floods the appliance, unplug the power plug.
   - Failing to do so may result in electric shock or fire.
6. Do not mix chlorine bleach with ammonia or acids such as vinegar.
   - Incorrect usage can produce poisonous gas, result in serious injury.
7. Do not reach into the washer while parts are moving. Before loading, unloading, or adding items, press the START/PAUSE button and allow the basket to come to complete stop before reaching inside.
   - Failing to do so may result in electric shock, injury or fire.
8. Do not allow children to play on or in the washer. Close supervision of children is necessary when the washer is used near children. As children grow, teach them the proper, safe use of all appliances.
   - Failing to do so may result in serious injury to persons.
   - Failing to do so may result in serious injury to persons.
10. Disconnect this appliance from the power supply before attempting any user maintenance. Turning the controls to the OFF position does not disconnect this appliance from the power supply.
    - Failing to do so may result in electric shock, injury or fire.
11. Do not clean the appliance by spraying water directly onto it.
    - This may result in discoloration, deformation, damage, electric shock or fire.
12. Do not use benzene, thinner, or alcohol to clean the appliance.
13. Do not wash items contaminated with gasoline, kerosene, benzene, paint thinner, alcohol, dry cleaning detergent or other flammable or explosive substances.
    - A spark may result in an explosion or fire.
14. Do not force the washer lid open while the washer is operating (high-temperature washing / drying / spinning).
    - Water flowing out of the washer may cause burns or cause the floor to be slippery. This may result in injury.
15. Make sure to remove the packaging (sponge, styrofoam) attached to the bottom of the washer before using it.
16. Do not insert your hand or a metal object under the washer.
    - This may result in injury.
17. Do not attempt to operate this appliance if it is damaged, malfunctioning, partially disassembled, or has missing or broken parts, including a damaged cord or plug.
    - This may result in electric shock, fire or death.
18. Do not touch the power plug with wet hands.
    - This may result in electric shock.
19. Do not turn the appliance off by unplugging the power plug while the washer is in operation.
    - Plugging the power plug into the wall socket again may cause a spark and result in electric shock or fire.
20. Keep hands and foreign objects clear of the lid and latch area when closing the lid.
    - Failing to do so may result in personal injury.
21. If the washer is contaminated by a foreign substance such as detergent, dirt, food waste, etc., unplug the power plug and clean the washer with a damp, soft cloth.
    - Failing to do so may result in discoloration, deformation, damage or rust.
22. The clear portion of the lid can be broken by a strong impact. Take care when using the washer.
    - If the clear portion is cracked or broken, it may result in injury.
23. After a water supply failure or when reconnecting the water supply hose, open the faucet slowly.
Safety and Precautions

Usage and Maintenance Warnings and Precautions

6. Open the faucet slowly after a long period of non-use.
   - The air pressure in the water supply hose or the water pipe may result in
damage to a part or in water leakage.

CAUTION

7. If a drain error occurs during an operation, check if there is a draining
   problem.
   - If the washer is used when it is flooded because of a draining problem, it
may result in electric shock or fire due to electric leakage.
8. Do not insert your hand or a metal object under the washer.
   - This may result in injury.
9. Insert the laundry into the washer completely so that laundry does not get
   caught in the lid.
   - If laundry gets caught in the lid, it may result in damage to the laundry or
the washer, or result in water leakage.
10. Ensure that the faucet is turned off when the washer is not being used.
   - Ensure that the water supply hose connectors are properly tightened.
   - Failing to do so may result in property damage or injury.
11. Open the faucet and check if the water supply hose connector is firmly
   tightened and that there is no water leaking before using the product.
   - If the water supply hose connectors are loose, it may result in water
leakage.
12. Do not stand on top of the appliance or place objects (such as laundry,
lighted candles, lighted cigarettes, dishes, chemicals, metal objects, etc.)
on the appliance.
   - This may result in electric shock, fire, problems with the product, or
injury.
13. Do not operate the appliance with wet hands.
   - This may result in electric shock.
14. Do not spray volatile material such as insecticide onto the surface of the
   appliance.
   - As well as being harmful to humans, it may also result in electric shock,
fire, or problems with the product.
15. Do not place an object that generates an electromagnetic field near the
   washer.
   - This may result in injury due to a malfunction.
16. Since the water drained during a high temperature wash or drying cycle is
   hot, do not touch the water.
   - This may result in burns or injury.
17. Do not wash, spin, or dry water-proof seats, mats, or clothing.
   - Do not wash thick, hard mats even if the washer mark is on the care
label. This may result in injury or damage to the washer, walls, floor, or
clothing due to abnormal vibrations.
18. Do not operate the washer when detergent dispenser is removed.
   - This may result in electric shock or injury due to water leakage.
19. Do not insert your hand into the detergent dispenser after opening it.
   - This may result in injury as your hand may be caught.
20. Do not place any non-laundry objects, such as shoes, food waste, or
animals into the washer.
   - This can cause abnormal vibrations that can damage the washer, and, in
the case of pets, cause severe injury or death.
21. Do not press the buttons using sharp objects such as pins, knives,
   fingernails, etc.
   - This may result in electric shock or injury.
22. Do not wash laundry contaminated by oils, creams, or lotions usually
found in skincare shops or massage clinics.
   - This may result in the rubber seal becoming deformed and water
leakage.
23. Ensure that the water inlet pipe is connected and the tap is opened before
washing clothes.
24. Do not leave metal objects (safety pins, hair pins, etc.) or bleach in the tub
for long periods of time.
   - This may cause the tub to rust.
   - If rust appears on the surface of the tub, apply a neutral cleansing
agent to the surface and use a sponge to clean it. Never use a metal
brush.
25. Do not use hot water from water cooling/heating devices.
   - This may result in problems with the washer.
26. Do not use natural hand-washing soap in the washer.
   - If it hardens and accumulates inside the washer, it may cause
problems with the product, discoloration, rust, or bad odors.
27. Do not wash large laundry items such as bedding in the washing net.
   - Failing to do so may result in injury due to abnormal vibrations.
   - Place smaller items, such as lace socks and lingerie in the washing
net.
28. Do not use hardened detergent.
   - If it accumulates inside the washer, it may result in water leakage.
29. Do not wash throw rugs or doormats.
   - If you wash throw rugs or doormats, the sand will accumulate inside
the washer. It may result in error such as no draining.
**Unpacking and Removing Shipping Material**

Remove the packing box and lift the washer up and away from the foam base cushion. Open the lid of washer to take out all accessories including protection foam.

**Key Parts and Components**

- **Top lid**
- **Control panel**
- **Frame**
- **Cabinet**

**Packaging materials can be dangerous to children:** Keep all packaging material, including plastic bags, polystyrene, etc., well out of children’s reach. Do not operate this appliance on the foam base cushion. Failing to do so will result in serious variation.

---

**Accessories**

- Water intake cap
- Screw
- Water supply hoses
- Bottom cover
- Quick connection adapter
- Owner’s manual

**Tools Needed in Installation**

- Phillips screwdriver
- Level
Installation Instructions

Location Requirements

Choose the Proper Location

- Flooring
For best performance, you must install your washer on a solidly constructed floor. Wood floors may need to be reinforced to minimize vibration and/or unbalanced load situations.
- Carpeting and soft tile surfaces are contributing factors to vibration which can cause your washer to move slightly during the spin cycle.

Do not install your washer in areas where water may freeze, since your washer will always retain some water in its water valve, pump, and hose areas. Frozen water can damage the belts, the pump, hoses, and other components. Never install on a platform or weakly supported structure.

- Electric
Use 120 Volt 60 Hz 15 Amps fuse or circuit breaker. Individual branch circuit serving only for your washer is recommended.

⚠️ Never use an extension cord.

- Grounding
Electrical grounding is required for this washer.
This appliance must be grounded. In the event of malfunction or breakdown, grounding will reduce the risk of electric shock by providing a path of least resistance for electric current.
This appliance is equipped with a power cord having a three-prong grounding plug for use in a properly installed and grounded outlet.
The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

⚠️ Warning: Improper connection of the equipment-grounding conductor can result in a risk of electric shock. Check with a qualified electrician or serviceman if you are in doubt as to whether the appliance is properly grounded.
Do not modify the plug provided with the appliance - if it will not fit the outlet, have a proper outlet installed by a qualified electrician.

⚠️ Never connect the ground wire to plastic plumbing lines, gas lines, or hot water pipes.

- Water
To correctly fill your washer in the proper amount of time, water pressure of 14 to 70 psi (100 to 500 kPa) is required.
Water pressure less than 14 psi may cause water valve failure, or may not allow the water valve to shut off completely, or may extend the fill time beyond what your washer controls allow, causing your washer to turn off and alarm error.
A time limit is built into the controls to prevent flooding in your home if a hose becomes loose.
The water faucet must be within 4 feet / 122 cm of the back of your washer to match the inlet hoses provided with your washer.
To avoid the possibility of water damage:
- Have water faucets easily accessible
- Turn off faucets when the washer is not in use.
- Periodically check that there is no leakage from the water inlet hose fittings.
Installation Instructions

Choose the Proper Location

- Drain facility
  The recommended height of the standpipe is 35in. or 90cm.
  The drain hose must be routed through the drain hose clip to the standpipe.
  The standpipe must be large enough to accept the outside diameter of the drain hose.

Install Your Washer

⚠️ Before installing, make sure there are rubber gaskets inside the fittings at both ends of the water supply hoses.

If there are no water inlet hoses packed with the washer or if the hoses are damaged, call Panda Service Center. Installing the water supply hoses without rubber gaskets can cause water leakage.

When you initially install the washer, be sure to use new hoses. Failing to do so may result in water leakage or overflow and may damage your property.

If a hose is too short, replace the hose with a longer, high pressure hose.

- Step 1: Move your washer to selected position
  Till the unit back onto its rear rollers and push it forward as shown in the figure below. Move the unit to a location as described in the previous Choose the Proper Location section.

  Front of the washer

  Back of the washer

  60~70°

⚠️ Make sure the location has a hard, level surface without carpeting.

There should be no direct sunlight.

Do not expose the unit to freezing temperatures (under 32° F or 0° C).

Install Your Washer

- Step 2: Install the Bottom Cover
  Slide the bottom cover into the slots on bottom surface of the unit as in the following figure, and fix it with two screws attached with the unit.

- Step 3: Connect the water hose
  1. The Quick Connection Adaptor is primarily for quick connection to a single faucet, such as a typical kitchen sink, in cases where the washer is stored in a different place than where it is used. Skip this step if you are connecting the washer to a sink with separate hot and cold faucets. The adaptor consists of two parts that quickly connect or disconnect. One part, the faucet fitting, is for connection to the faucet and the other part, the hose fitting, connects to the cold water hose of the washer.

  - Pull back on the white ring to free the faucet fitting from the adaptor for installation into the faucet.
  - Screw the end of the cold water hose onto the base of the hose fitting.
  - If the faucet has internal thread, unscrew the aerator if present from the tip of the faucet. Then screw the faucet fitting into the faucet. Make sure that the black rubber gasket is on the top of the adaptor before screwing it in.
  - If the faucet has external thread, remove the gasket from the top of the faucet fitting, and screw the fitting over the external threads.
  - Pull back on the white ring to connect the two parts of the adaptor back together.

NOTE:
When connected to a single faucet that can dispense either hot or cold water, both hot and cold water can be run through the cold water line for washing use. However, it is recommended to only run cold water washes when the adaptor is connected to such a faucet.

Pull down on the white ring to divide the adaptor into two parts.
Top part: Faucet fitting
Bottom part: Hose fitting

Cold
Hot

2. Connect the ends of the water supply hoses to the HOT and COLD faucets. For convenience, use the Quick Connection Adaptor for connection to the cold water faucet. See instructions for Quick Connection Adaptor use in Step 1 above.
Installation Instructions

Install Your Washer

3. Tighten the fittings by hand until they are snug, and then tighten them an additional two-thirds of a turn with a wrench.

WARNING When you fasten the fittings, do not fasten them too tightly or apply tape or sealant to the faucets or water supply intakes. This can damage the fittings. After you have connected the water supply hoses to the faucets, ensure that they are connected securely by pulling the water supply hoses downwards.

4. Place the unconnected ends of the hoses into a bucket and open the faucets connected to the two water supply hoses for 10 or 15 seconds to remove any foreign substances from the hoses. Close the faucets before continuing.

5. Connect the ends of the water supply hoses to the water supply intake connections at the back of the washer.

The water supply hose connected to the HOT faucet must be connected to the hot water supply intake and the water hose connected to the COLD faucet must be connected to the cold water supply intake.

6. Tighten the fittings by hand until they are snug, and then tighten them an additional two-thirds of a turn with a wrench.

WARNING Confirm that the water supply hoses are not twisted or bent. If the hoses are twisted or bent, the hoses can leak and cause electric shock due to the water leakage. To ensure the correct water usage, connect both the HOT and COLD water faucets. If either or both are not connected, an error code can occur.

If you do not want to use the HOT water supply hose, install the water intake cap into the HOT water supply intake hole. In this case, you must select Cold water as the wash temperature choice.

See Wash Temp in Control Panel section on page 23.

7. Turn on the HOT and COLD water supplies and check all the water supply intake connections and the faucets for water leaks.

Installation Instructions

Install Your Washer

- Step 4: Connect the drain hose

Position the other end of the drain hose. It can be positioned in three ways.

A. Over the edge of a wash basin.

Secure the guide to the side of the basin wall with a hook or to the tap with a piece of string to prevent the drain hose from moving.

B. In a standpipe

The standpipe must be no shorter than 32 in. (81cm) and no longer than 39 in. (100cm).

C. In a laundry tub.

The laundry tub must be no shorter than 32 in. (81cm) and no higher than 39 in. (100cm).

WARNING Make sure that the connection between the drain hose and the wash basin, standpipe or laundry tub is not airtight.

- Step 5: Leveling your washer

See if the washer is level by checking the position of the tub or using a leveling gauge.

1. Slide the washer into position.

2. Open the lid of the washer, and pour the water into the tub to just below the pulsator level.

3. If the washer is level, the pulsator is positioned at the center of the washer as shown in the figure above right. If not, level your washer by turning the front leveling feet clockwise or counterclockwise as necessary.
Installation Instructions

Install Your Washer

- **Step 6: Powering your washer**
  Plug the power cord into a 3-prong, well grounded 120 Volt 60 Hz approved electrical outlet protected by a 15 amp fuse or comparable circuit breaker.
  Your washer is grounded through the third prong of the power cord when plugged into a 3-prong grounded electrical outlet.

  ![Electrical connection diagram]

  The electrical valve, capacitor, of this appliance are intentionally not grounded and may present a risk of electric shock during servicing.
  Do not contact these electronic devices while the appliance is energized.

- **Step 7: Running a test cycle**
  Run a test cycle as follows to check if your washer is properly installed.
  1. Press the **Power** button to turn on your washer.
  2. Select the **Rinse+Spin** cycle by pressing the **Function** to turn ON the Rinse and Spin lights.
  3. Press the **Start/Pause** button to start the test cycle.
  4. The washer should not rock or vibrate excessively when water is supplied or when washing or spinning, and should drain well during the spin cycle.

  ![Test cycle icons]

  If water leaks while water is being supplied or drained, check the water connections.
  If the washer rocks and vibrates excessively, level your washer again.

- **Step 8: Storing your washer**
  If you want to store your washer at another location, unplug it, drain any remaining water from the drain pipe and hook the pipe onto the back of the washer.
  Disconnect the water inlet hoses from the faucets and move washer to new location.

Operating Instructions

**Control Panel**

**Procedure**
- **Start/Pause**
- **Extra Rinse**
- **Program**
- **Temp.**
- **Load Size**
- **Delay**
- **Procedure**

**Numbering**

1 - **ON/OFF**
  Press the ON/OFF button once to turn ON the power to the washer. Press again to turn OFF the unit.

2 - **START/PAUSE**
  Press the **START/PAUSE** button once to the start the wash cycle.
  Press the button during operation to pause the cycle. Press again to continue the cycle.

3 - **Extra Rinse**
  Press the EXTRA RINSE button to add one rinse.

4 - **Program**
  Press this button to select your desired washing program.
  - Normal (light)
  - Quick (Flash)
  - Heavy (light)
  - Bulky (Flash)
  - Delicate (light)
  - Spin Only (Flash)

5 - **CONTROL LOCK**
  The control lock function can help to prevent children from changing the operation status of the unit.

6 - **Temperature**
  Press this button to select water temperature for washing. Cold light only indicates Cold Water selection. Warm light only indicates Warm Water selection. Hot light only indicates Hot Water selection.
Operating Instructions

7 - Load Size
Press this button to set your washing load size. Your setting will decide the water level throughout all steps in the cycle.

8 - Delay
Press this button to set your desired time to delay start the washer.

9 - Digital display
The digital display will show and count down the estimated minutes for the wash cycle selected. Or, if Delay Start is set, the display will count down the hours until the cycle begins, and then change to a minute countdown for the wash cycle.

10 - Procedure
Press this button to select cycle steps included in your setting cycle. The related light will be ON indicating that the step is selected.

Normally, all Soak, Wash, Rinse and Spin, steps are included with all lights ON.

Washing a load of laundry

- Step 1: Power on your washer
Press the ON/OFF button to power your wash on.

- Step 2: Prepare and Sort Laundry
Before loading your laundry, be sure to take out coins, keys and other hard objects, and close all zippers to prevent the clothes from damage.

Sort laundry by fabric type, soil level, color and load size as needed. Refer to the Fabric Care Chart in the APPENDIX.

- Step 3: Load your washer
To ensure good cleaning results do not overload the tub, especially when washing heavily soiled loads. Never load the tub more than 3/4 full.

Overloading may reduce washing efficiency, cause excess wear, and possibly cause creasing or wrinkling of items in the load.

Note: To add a forgotten item:
1. Press the START/PAUSE button to pause the washer.
2. Wait for the tub to stop turning, then open the door.
3. Add the item, close the door, and then press the START/PAUSE button. The cycle will resume.

Operating Instructions

Washing a load of laundry

- Step 4: Add detergent
This washer is designed for high efficiency (HE) powder detergent only. Draw the compartment out and add the recommended amount of detergent directly into the detergent compartment before starting your washer. The normal amount of detergent to use is 1/4 to 1/2 of the maximum amount recommended by the detergent manufacturer. Always reduce the amount of detergent if the load is small or lightly soiled, or if your water is very soft. Never use more than the maximum amount recommended by the detergent manufacturer.

Never pour any liquid bleach directly onto the load. It can cause fabric damage, such as weakening of cloth fibers or color loss.

- Step 5: Select your desired cycle and options
First, select your desired washing program.

<table>
<thead>
<tr>

</table>

The Spin Only cycle can help remove some moisture from clothing to reduce drying time and cost.

Second, select the water level based on a Large, Medium or Small load size. Press the Load Size button to change the water level setting.

Third, select your desired wash cycle steps. If you want the wash cycle to perform all four steps, just keep them lighted. Pressing the button will change the number of steps performed.

In addition to Soak / Wash / Rinse / Spin you can select Wash / Rinse / Spin, Wash / Rinse, Rinse / Spin, Wash, or Spin.

Fourth, select your desired water temperature for washing action. For some cycles, options in this function will be limited accordingly.

Cold light only indicates Cold Water selection
Warm light only indicates Warm Water selection.
Hot light only indicates Hot Water selection.

Note: The temperature setting is just for washing action. Rinsing action is cold water only for all cycles.
Operating Instructions

Washing a load of laundry

Last, you may delay the start time for washing if desired. Press the Delay button. The display will change from minutes to hours. Each further press of the Delay button will add 1 hour to the display up to 24 hours. One more press will cancel the Delay function and the display light will turn off.

Press the EXTRA RINSE button to add one rinse.

- Step 6: Start the cycle

Press the START/PAUSE button to start the washing cycle. When the washing cycle begins, the Estimated Time in minutes for the cycle to complete will show and count down in the digital display. Or, if Delay Start is set, the display will count down the hours until the cycle begins, and then change to a minute countdown for the cycle.

Warning: When the washer is running, you should pause the program and wait for the basket stopped completely before you open the door.

Note:
If you want to cancel the Delay Start function after it is started, you should power off the unit and reset all functions before restart the unit.

Control lock

This function is useful to prevent children from changing the operation status of the unit.

Press and hold the “Temp.” and “Program” buttons simultaneously to activate this function.

The Control lock will light.

Press and hold the “Temp” and “Program” buttons simultaneously again to deactivate this function.

When Control Lock is activated, no buttons will function except for POWER and the ability to deactivate Control Lock as described above.

Energy efficiency test program:

“Normal” wash cycle is the recommended wash cycle to wash up to a full load of normally soiled cotton or linen clothing.

Notes:
- Normal is the recommended wash cycle to wash up to a full load of normally soiled cotton or linen clothing.
- The cycle/normal on large load size and cold water temperature has a much longer spin time (44 minutes) than other cycles, which removes more water from your clothes than other cycles, providing you with energy savings when drying your clothes in your dryer.
- Hot and warm water temperatures are the same when using Normal/Eco. If you need a higher temperature wash, use a different program.
User-Maintenance Instructions

Regular Cleaning and Maintenance

- Cleaning the exterior
  Turn off the water faucets after finishing the day’s washing. This will shut off the water supply to your washer and prevent the unlikely possibility of damage from escaping water. Leave the lid open to allow the inside of your washer to dry out. Use a soft cloth to wipe up all detergent, bleach or other spills as they occur. Clean the following as recommended:
  - Control Panel - Clean with a soft, damp cloth. Do not use abrasive powders or cleaning pads. Do not spray cleaners directly onto the panel.

- Cleaning the interior
  Clean the interior of your washer periodically to remove any dirt, soil, odor, mold, mildew, or bacterial residue that may remain in your washer as a result of washing clothes. Failure to follow these instructions may result in unpleasant conditions, including odors and/or permanent stains on your washer or laundry. Hard water deposits may be removed, if needed. Use cleaners labeled “Washer safe”.

- Tub clean
  Run an Express cycle with some bleach every month to clean the tub. This will also help to remove mold which may occur inside the washer.

- Lint filter clean
  There is a built-in lint filter in your washer. It can help to collect lint during washing cycle.
  It is suggested to clean the lint filter every 10 cycles.
  Take it out and clean the filter with water. Then place it back into the washer.

- Pump filter clean
  There is a built-in Pump filter in your washer. It can help to protect the pump during washing cycle.
  It is suggested to clean the lint filter once every month.
  It is suggested to clean the pump filter once every month.
  Take the filter out and clean it with water. Then place it back into the washer.

Troubleshooting

Before calling for service

Your washing machine is equipped with an automatic error-monitoring system to detect and diagnose problems at an early stage. If your washer does not function properly or does not function at all, check the following before you call for service:

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thumping sound</td>
<td>Heavy wash loads may produce a thumping sound. Wash load may be out of balance.</td>
<td>This is normal. If sound continues, washer is probably out of balance. Stop and redistribute wash load. Pause the cycle and redistribute the load.</td>
</tr>
<tr>
<td>Vibrating noise</td>
<td>Packaging materials were not removed. Wash load may be unevenly distributed in the tub. Not all leveling feet are resting firmly and evenly on the floor. Floor not rigid enough.</td>
<td>See the UNPACKING AND REMOVING SHIPPING MATERIAL section in the Installation instructions. Pause the cycle and redistribute the load. See Leveling the Washer in the Installation Instructions. Make sure that the floor is solid and does not flex. See Flooring in the Installation Requirements.</td>
</tr>
<tr>
<td>Excessive sudsing</td>
<td>Too much detergent or incorrect detergent.</td>
<td>HE detergents are formulated specifically for High-Efficiency washers and contain suds reducing agents. Only use detergent with the High-Efficiency (HE) logo.</td>
</tr>
<tr>
<td>Water leaking</td>
<td>Inlet hose connection is loose at faucet or washer. House drain pipes are clogged. Drain hose has come out of drain or is not inserted far enough. A large item such as a pillow or blanket is above the top of the tub.</td>
<td>Check hoses for leaks, cracks and splits. Check and tighten hose connections. The washer pumps out water very rapidly. Check for water backing up out of the drain pipe during drain. If water is seen coming out of the drain, check for proper drain hose installation and check for restrictions in the drain. Contact a plumber to repair drain pipe. Tie drain hose to inlet hose or standpipe to prevent it from coming out during drain. For smaller drain pipes, insert the drain hose into the pipe as far as the drain hose flange. For larger drain pipes, insert the drain hose into the pipe 1-2 in. past the flange. Stop the washer and check the load. Make sure the load does not cret above the top edge of the tub.</td>
</tr>
</tbody>
</table>
## Troubleshooting

### Before calling for service

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rattling and clanking noise</td>
<td>Foreign objects, such as keys, coins, or safety pins, may be in tub or pump.</td>
<td>Stop washer, check tub and drain filter for foreign objects. If noise continues after washer is restarted, call for service.</td>
</tr>
<tr>
<td>Wrinkling</td>
<td>Washer not unloaded promptly. Washer overloaded. Hot and cold water inlet hoses are reversed.</td>
<td>Always remove items from the washer as soon as the cycle is complete. The washer can be fully loaded, but the tub should not be tightly packed with items. The lid of the washer should close easily. Hot water rinse can set wrinkles in garments. Check the inlet hose connections.</td>
</tr>
<tr>
<td>Staining</td>
<td>Washer was not unloaded promptly. Clothes were not properly sorted.</td>
<td>Always remove items from the washer as soon as possible after the cycle is complete. Always wash dark colors separately from light colors and whites to prevent discoloration. Never wash heavily soiled items washed with lightly soiled items.</td>
</tr>
<tr>
<td>Wash cycle time is longer than usual</td>
<td>The washer automatically adjusts the wash time for the amount of laundry, water pressure and other operating conditions.</td>
<td>This is normal. The washer adjusts cycle time automatically to provide optimal results for the selected cycle. The time remaining shown in the display is only an estimate. Actual time may vary.</td>
</tr>
<tr>
<td>Musty or mildewy odor in washer</td>
<td>Incorrect or too much detergent has been used. Inside of tub was not cleaned properly.</td>
<td>Use only High-Efficiency (HE) detergent in accordance with the manufacturer’s instructions. Run an Express cycle with bleach once a month to clean tub and remove any mold from inside washer.</td>
</tr>
</tbody>
</table>

### Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Washer will not turn ON</td>
<td>Power cord is not properly plugged in. House fuse is blown, circuit breaker has tripped, or power outage has occurred. House fuse is blown, circuit breaker has tripped, due to multiple appliances on one outlet.</td>
<td>Make sure that the plug is plugged securely into a grounded, 3-prong, 120-VAC, 60-Hz outlet. Reset circuit breaker or replace fuse. Do not increase fuse capacity. If the problem is a circuit overload, have it corrected by a qualified electrician. Reset circuit breaker or replace fuse. If more than one appliance is connected to the outlet, call an electrician to have an additional circuit installed.</td>
</tr>
<tr>
<td>Water leaks</td>
<td>Over sudsing of detergent.</td>
<td>Over sudsing may create leaks, and may be caused by the type and amount of detergent used. High-Efficiency detergent is the only detergent recommended. Make sure that detergent and any additives are put into the correct dispenser compartments. The normal amount of detergent to use is 1/4 to 1/2 of the maximum amount recommended by the detergent manufacturer. Always reduce the amount of detergent if the load is small or lightly soiled, or if your water is very soft. Never use more than the maximum amount recommended by the detergent manufacturer.</td>
</tr>
<tr>
<td>Poor stain removal</td>
<td>Previously set stains.</td>
<td>Articles that have previously been washed may have stains that have been set. These stains may be difficult to remove and may require hand washing or pre-treating to aid in stain removal.</td>
</tr>
</tbody>
</table>

APPENDIX

Fabric Care Chart

The following symbols provide garment care direction. The clothing care labels include symbols for washing, bleaching, drying and ironing, or dry cleaning when necessary. The use of symbols ensures consistency among garment manufacturers of domestic and imported items. Follow care label directions to maximize garment life and reduce laundering problems.

Normal

Permanent Press / Wrinkle Resistant / Wrinkle Control

Gentle/Delicates

** The number of dots represent appropriate wash water temperatures for various items. The temperature range for Hot is 105°-125°F/41°-52°C, for Warm 65°-105°F/29°-41°C and for Cold 60°-85°F/16°-29°C. (Wash water temperature must be a minimum of 60°F/16°C for detergent activation and effective cleaning.)The clothes washer cannot ensure these temperatures because the actual temperature of the water entering your washer depends on water heater settings and regional water supply temperatures. For example, cold water entering the home in the northern states during winter may be 40°F/4°C which is too cold for effective cleaning. In this situation, you will need to adjust the water temperature by selecting a warm setting, adding some hot water to the MAX FILL line, or using your Washer’s heating option, if available.
