

Thank you for choosing YAWWALK products. To maintain the luster and functionality of your products for years to come, please follow these professional care and maintenance instructions.

I. PRE-INSTALLATION & SETUP

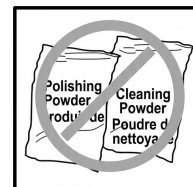

- **Inspect Parts:** Before installation, verify that all components are present according to the packing list.
- **Professional Installation:** We recommend installation by a licensed professional. Do not attempt to disassemble the internal main body of the product.
- **Flush the System (Critical):** Before connecting faucets or showers, flush the water supply lines for several minutes. This removes sand, debris, and impurities that could clog valves or damage internal seals.
- **Leak Check:** After installation, inspect all joints and connections for leaks under pressure.

II. DAILY CLEANING & MAINTENANCE

To keep the finish bright and prevent mineral buildup, regular maintenance is essential:

- **Rinse & Dry:** After each use, rinse the surface with clean water and wipe it completely dry with a soft, lint-free cotton cloth. This prevents water spots and lime scale.
- **Neutral Cleaning:** Clean the product regularly using a mild liquid detergent or a neutral soap solution.
- **Approved Cleaners:** You may use colorless glass cleaners or non-abrasive polishes that dissolve completely. Always apply the cleaner to a cloth first, rather than spraying directly onto the hardware.

III. PRECAUTIONS

- **No Abrasives:** Do not use scouring powders, abrasive pads, steel wool, or coarse cloths. These will scratch and dull the finish permanently.
- **No Harsh Chemicals:** Avoid cleaners containing acid (hydrochloric, hydrofluoric, phosphoric), bleach, ammonia, or vinegar. These can cause surface corrosion or discoloration.
- **No Corrosive Environments:** Avoid exposing hardware to harsh chemicals in unventilated areas (e.g., during bathroom renovations). If exposed to acid or chemicals, rinse immediately with plenty of water.

IV. PRODUCT-SPECIFIC TIPS

- **Kitchen Sinks:** Do not leave salty foods, tea bags, or wet sponges in the sink for long periods. Avoid dropping heavy or sharp objects directly onto the surface.
- **Floor Drains:** Regularly remove the grate to clear hair and debris from the trap to ensure optimal drainage and prevent odors.
- **Hardware Handles:** Avoid hanging heavy objects on handles. Clean regularly to remove oils from skin contact, which can affect the finish over time.
