eLEDing SMART Solar Light

Recommended One Step "Setup"

1. Open the Battery compartment and carefully connect the Lithium Battery. **Important Note:** the wire connectors fit only one way(refer to the User Manual for photo references).
2. Slide the main switch to position **A or B (SMART-ON)**. This will turn the light on, indicating the battery and the unit are both functioning properly. Then slide the switch back to **OFF**.
3. Follow the Installation Steps in the User Manual to install the light and the solar panel (if not a self-contained model).
4. There is only one Setup step for most lighting installations. Slide the main switch to position **B for SMART profile**. Keep the factory **PRE-SET** positions for the two dials/knobs as recommended settings.
5. If your initial power-on setup is done during daylight then the light will stop illuminating after an initial 10 minute setup period. Then every evening at Dusk the light will automatically turn on and operate with the SMART illuminating profile.

Please refer to the User Manual-Installation instructions for additional information regarding the use of this light. Instructions are provided for using this SMART light as a traditional motion sensing activated light, adjusting brightness when motion activated, setting the soft-glow moon-light lighting dimming level, setting the sensitivity range of motion detection, and other operational information is provided.
