TOOL SET ANATOMY

Comes Fully Assembled, (29½"H)

NEOCLASSIC

Tongs designed to easily manipulate logs. Solid rivets assure that the tongs work smoothly and will not rattle or come apart.

Handles designed to fit the hand. Each is permanently bonded to the rod so it will not come loose with use.

Cast racks are hand filed during assembly, assuring a smooth fit for tools.

Tools are sturdy and properly balanced. To insure durability we use heavy solid brass or steel in our rods.

Shovels are solidly riveted and generously proportioned.

Balanced with broad heavy bases, designed with enough weight to anchor each fireset and prevent tipping.

Brushes made from Tampico, a natural fibre selected for its excellent sweeping action, texture and durability.
