

# Honeywell | Evaporative Air Coolers

## Choosing the Right Evaporative Air Cooler for your Area

Evaporative Air Coolers are more effective in environments with maximum relative humidity of 60% or less. Warm, dry air is important for effective evaporative cooling. The temperature decrease will be greater in drier environments because higher evaporation occurs when the humidity is low. Evaporative Air Coolers produce moisture and can be used to increase humidification in a room.

\* Average U.S. summer humidity in July. Reference: [www.currentresults.com/Weather/US/average-state-temperatures-in-summer.php](http://www.currentresults.com/Weather/US/average-state-temperatures-in-summer.php)

<sup>†</sup> In high humidity areas, outdoor air coolers are suitable for outdoor applications (Patio/Backyard). Choose Honeywell Portable Air Conditioners for indoor cooling in these areas.
