TEKNOR APEX

For easy use, follow the break-in procedures below:

- 1. Uncoil and straighten hose to full length.
- Check that washer is seated in the coupling. The washer will prevent leaking at the faucet.
- 3. Attach hose to faucet, then attach nozzle.
- 4. Turn water on full and let trapped air out with nozzle.
- 5. Pull hose straight to remove any twists caused by packaging.

Vinyl garden hoses perform better at temperatures above 55 F degrees.
