

INSTRUCTION

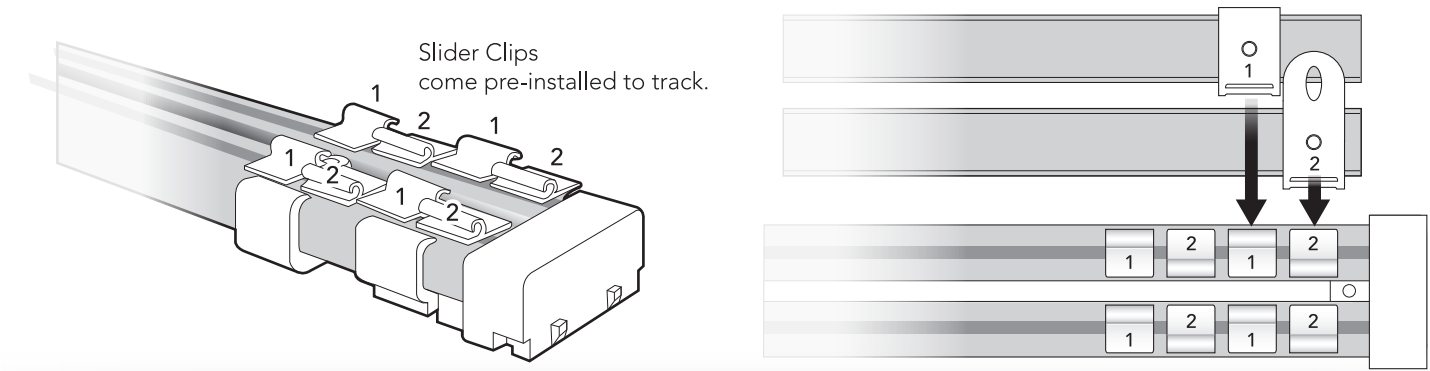

Double Rail Sliding Panel System

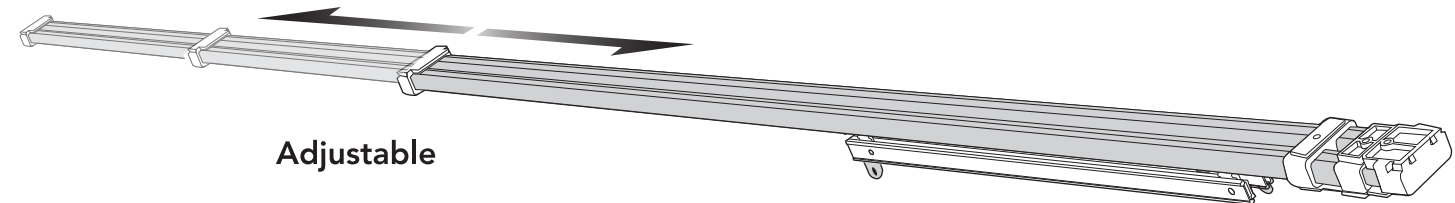

1 Check all pieces to make sure you have received complete set

2 Snap the guide rails into the slider clips. Be sure to follow the correct number sequence. **Make sure the Velcro side of the head-rail is facing you.**

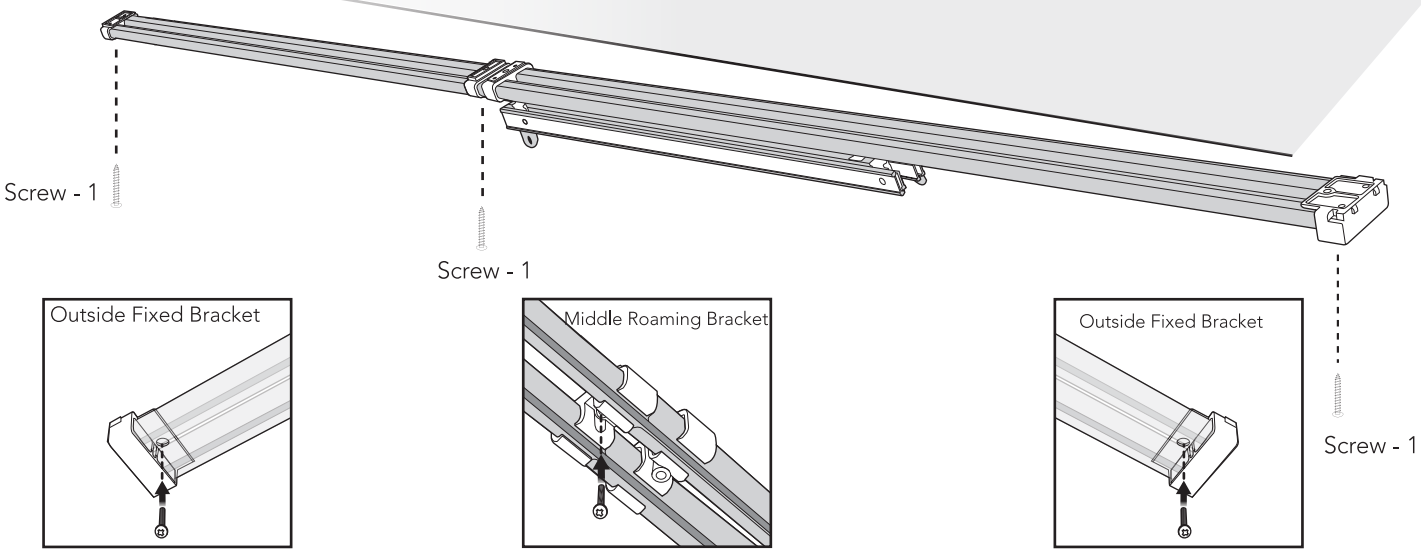

3 Adjust the panel track to the width needed. **Be careful not to over extend the track and cause it to separate completely.**

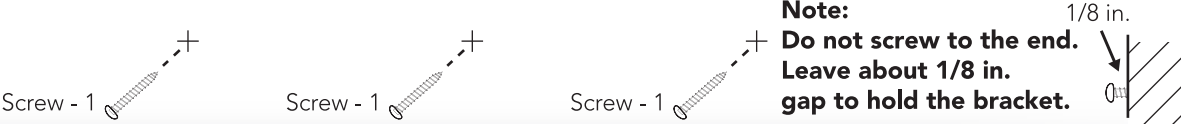

4 Ceiling Mount

Take screw-1s (see step 1) and screw up through the 2 fixed brackets (see below) on the outside and 1 through the roaming bracket on the middle of the head rail up into the ceiling (using anchors is recommended).

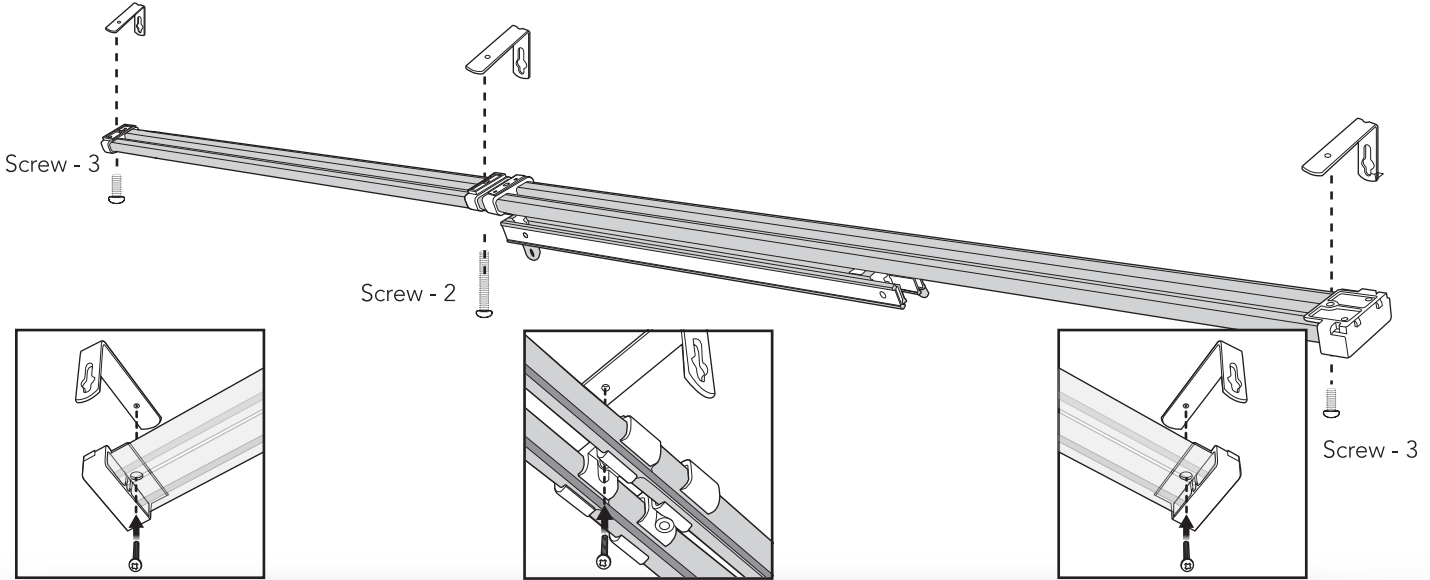

Wall Mount

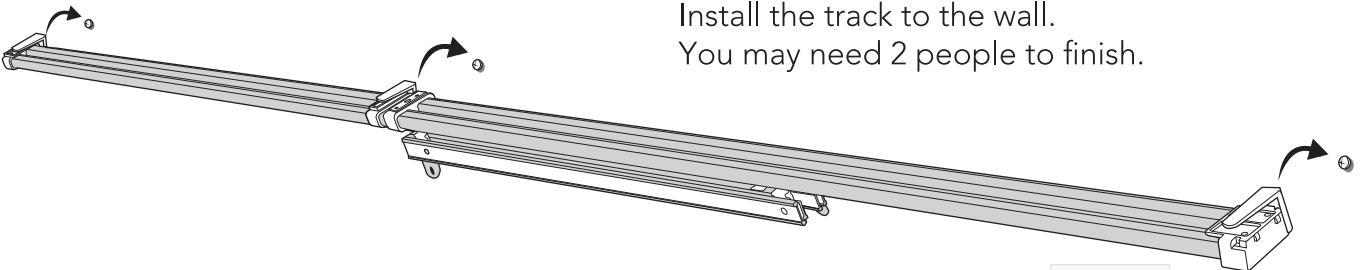

Measure the 3 positions and screw to the wall.

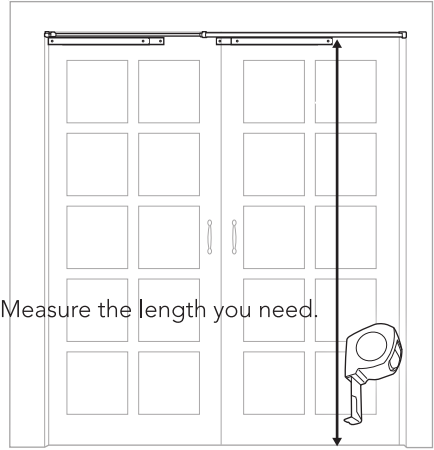

Once screws are in place, proceed to mount L-brackets onto the headrail.

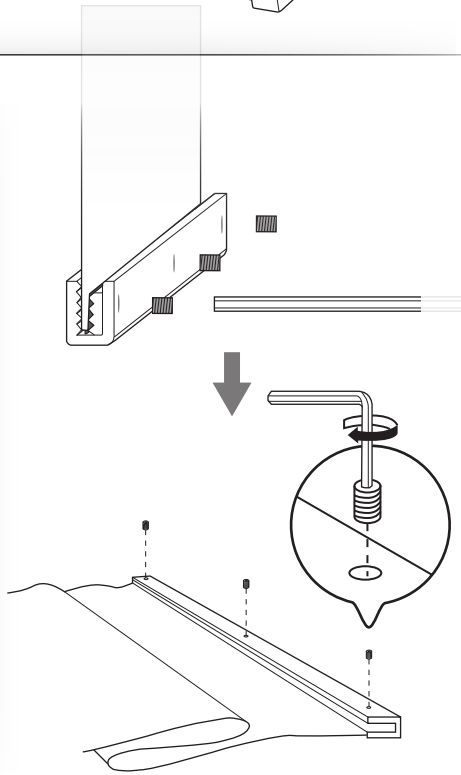

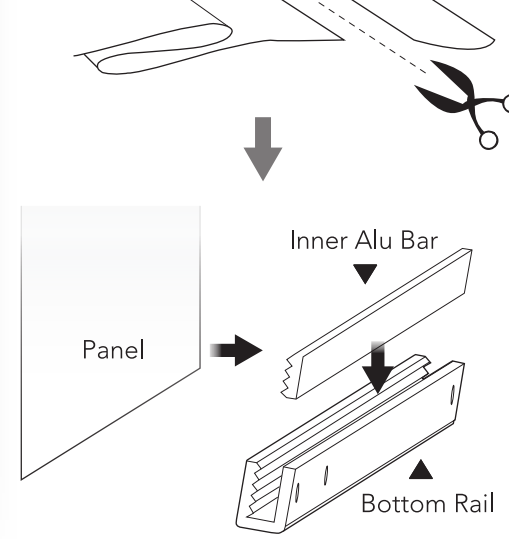

Install the track to the wall. You may need 2 people to finish.

5 Measure the length needed for the panels. Cut the panels to fit your desired length. Then install the bottom rail and inner alu bar for a clean look.

Cut the panel according to your measurements.

Thank you for choosing Chicology!
