Premium Vinyl Stair Railing

Installation Guide

THE BEST CHOICE FOR STRONG & DURABLE RAILING SYSTEMS

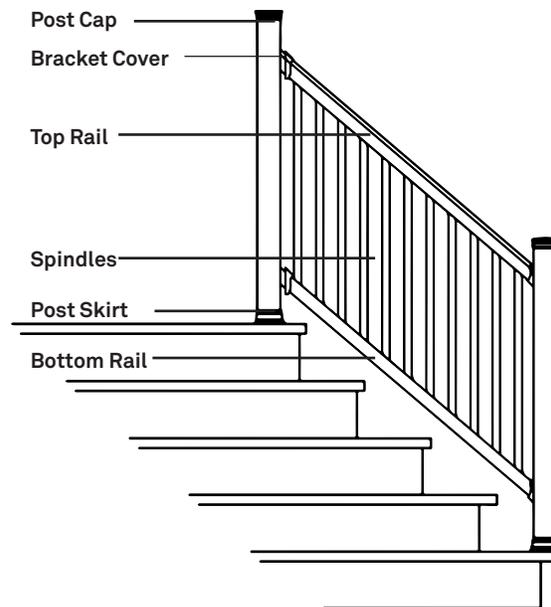

Our exclusive manufacturing process ensures our vinyl railing will provide superior strength plus it is virtually maintenance free. This guide will help make your installation easy. For questions, please call 1-855-224-9761 and welcome to Weatherables.

Please note:

It is the responsibility of the installer to conform to local building codes and safety requirements. It is also the installer's responsibility to obtain all necessary building permits. These instructions are guidelines and do not cover every installation scenario. Separate instructions are provided for railing brackets. If purchasing post mounts specific instructions will be included within the packaging. Review all instructions before starting railing installation. The installer may need to modify the exact installation method to meet unique site requirements.

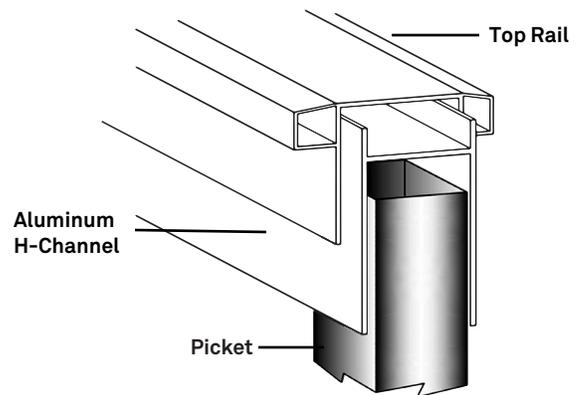

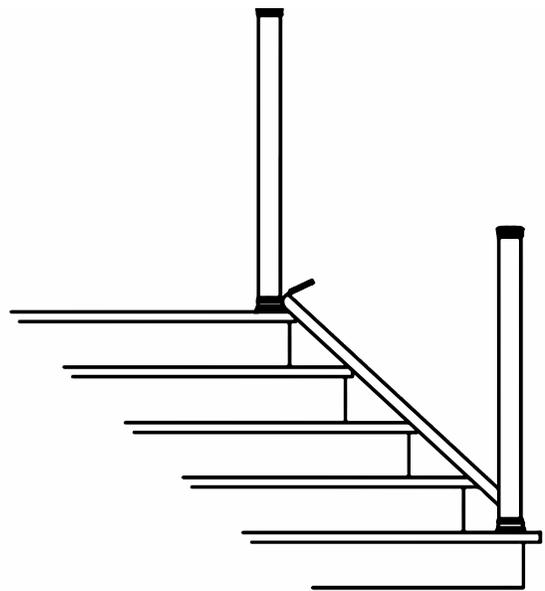

THE MANUFACTURER WILL NOT BE HELD RESPONSIBLE FOR INCORRECT OR UNSAFE INSTALLATION.

1. If cutting material for installation, double check all measurements before cutting.
2. Some stair installations require longer posts. Test all railing sections before cutting.
3. Standard stair brackets can accommodate angles of 30-40°.

Installation Tips:

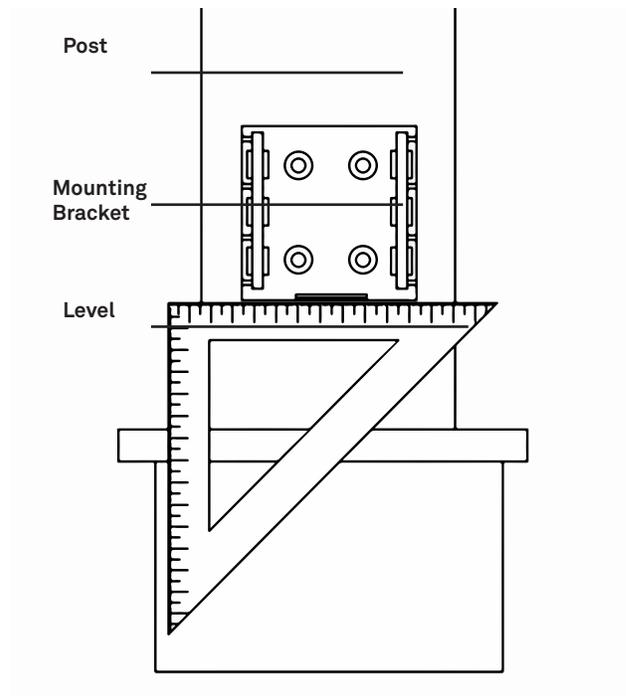

1. If using vinyl sleeves, it is easier to mark the mounting bracket position prior to installing them over wood posts or post mounts.
2. The bracket kits include two different size screws. The 1-1/2" screws are used to install the black mounting bracket to the post. The 1" screws are used to attach the rail to the black mounting bracket.
3. If you are using an optional post mount, use the 1" screws that come with the post mounting hardware to install the mounting brackets.
4. While marking the angle on the bottom rail ensure the spindles are equally spaced from each post.
5. A non-ferrous metal blade can be used to cut the vinyl and aluminum at the same time. Cut slowly and use all safety precautions.
6. Before installing the rails, ensure the aluminum is seated into the vinyl rail properly. The large opening of the H-channel should face towards the pickets.
7. If the posts are plumb, the angle should be the same for both rails. Always double check before cutting the rails.
8. Stair sections do not include a footblock. Instead aluminum inserts are provided for both the top and bottom rail.

Section 1

These instructions are designed to be supplemental; review all instructions with the brackets before starting installation.

1. Plumb posts and install the optional post skirt before installing the mounting brackets.
2. Determine the distance between the deck and the bottom rail based on local code (generally 2").
3. Subtract 1/4" from the distance between the deck and the bottom rail to allow for the thickness of the mounting bracket and mark the post with a pencil.
4. Center the mounting bracket on the post and install the bottom of the mounting bracket on the drawn line.
5. Using the provided 1-1/2" screws, fasten the mounting bracket to the post.
6. Stair installation requires the rail ends to be cut at the same angle as the stairs.
7. Lay the bottom rail along the stairs, making sure the holes for the spindles are facing up.
8. Use a pencil to mark the rail angle. Repeat for the top rail.
9. Subtract 5/8" from the total length of the rails to allow for the mounting brackets.
10. Mark the bottom and top rail to the same length, ensuring the spindle holes line up before cutting the rail.
11. Cut the vinyl rail and the aluminum insert to the same length.

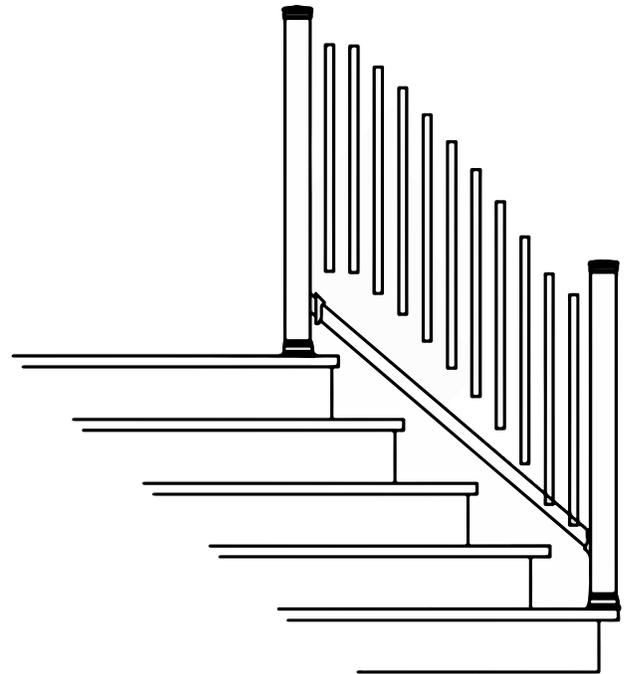

This step will be repeated on the opposite post.

Section 2

1. Slide the bracket covers over the bottom rail with the flush edges towards the post. Brackets cannot be installed after the rails have been secured.
2. Insert the bottom rail into the already installed mounting brackets.
3. Fasten the vinyl rail to the mounting brackets using the provided 1" screws, one on each side of the rail.
4. Gently slide and snap the bracket covers over the rails.

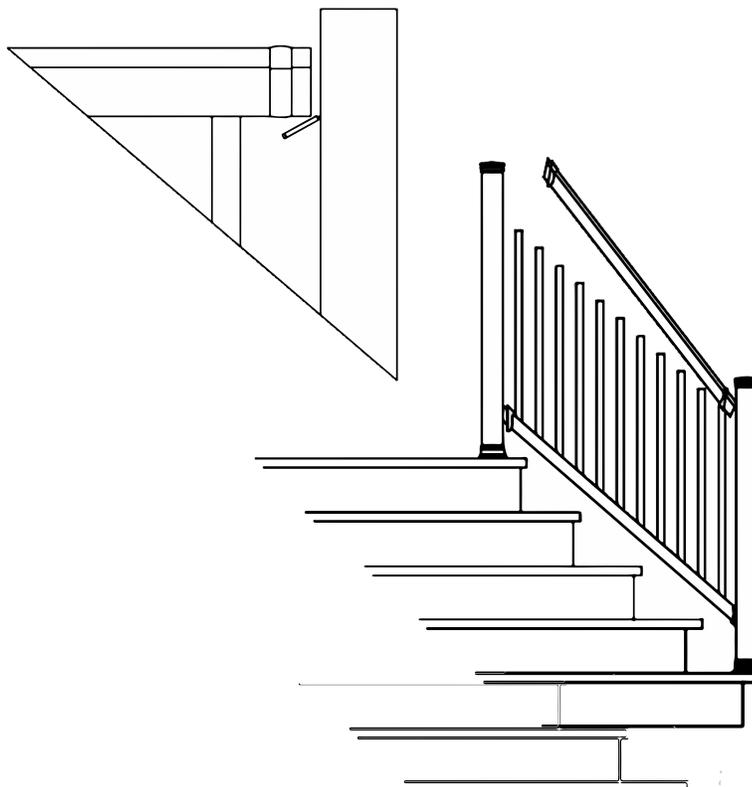

Note: A small dimple on the outside of the bracket cover may be visible on some brackets. This is done in the molding process and denotes the bottom of the bracket. Make sure the dimple is installed towards the ground.

This step will be repeated on the opposite post.

Section 3

1. Insert the spindles into the bottom rail; then starting at one end, install the top rail by lining the spindles up with the routed holes in the rail.
2. Once the top rail is seated onto the spindles, properly slide the mounting bracket into position and mark it using a pencil.
3. Slide the rail off the spindles.
4. Using the provided 1-1/2" screws, fasten the black mounting bracket to the post in the marked position.
5. Make sure the bracket covers are on before setting the top rail into place.
6. Set the top rail back into installed mounting brackets.
7. Fasten the vinyl rail into the mounting brackets using the provided 1" screws, one on each side of the rail. This will secure the rail.
8. Gently slide and snap the bracket covers over the mounting brackets.

Section 4

1. If needed, alter the post height and install the post caps.
