Instructions - Please retain these instructions for future reference. You have purchased a Universal Door Chime that serves all residential applications. It can be installed as a Wired chime, where the power is supplied by a transformer with wires, or it can be a Wireless chime powered by 3 C cell batteries. Use the following guidelines to assist you in deciding the mode that best suits your application:

If you are building a new house:
- The wired mode would be best if you are having an electrician install the door chime. The electrician will install a transformer and run the wires for the door chime as well as pushbuttons.
- You can also elect to use the Wireless mode. However, the batteries in the chime and pushbuttons will need to be replaced periodically.

If you are replacing a working Wired Doorbell:
- The Wired mode would be the best option.

If you have a wired doorbell, but it doesn’t work:
- First install this chime in the Wired mode. Connect the wires as explained in the section “Replacing a Wired Doorbell”. If the chime works, this is the best option.
- If the chime does not work, please either 1 or 2 IQ America Wireless Pushbuttons and follow the instructions for the Wireless mode.

If your home does not have a wired doorbell, you should use the Wireless Mode.

This package contains:
- Universal Chime and Decorative Cover
- 2 screws and 2 wall plugs for installing door chime
- 1 Diode

WIRE MODE: New Installations
New installations will require a 16V 10W transformer. It is suggested that this be installed by a licensed electrician.

You will require: (for Wired option)
- A small Phillips head screwdriver.
- (For new installations) Transformer 16V 10W (IQ America DT1610)
- (For new installations) 2 Doorbell Pushbuttons
- 4 screws for installing doorbell pushbutton
- 1 Diode

Installing the Transformer
Warning: Turn power off at fuse or circuit breaker before installing transformer. Transformer should be installed on or near a junction box. They can also be mounted to the electrical service panel. Junction boxes in utility rooms, crawl spaces, or basements are preferred. Avoid attic locations. Failure to use a transformer with adequate power will result in loss of sound or may result in the chime being faulty. Contact a qualified electrician if you have any questions as to the suitability of the system or any doubts about your ability to wire it correctly.

Remove Decorative Chime Cover
Remove the decorative cover by simply pulling it away from the rear casing. When replacing the cover, simply press it back on the base.

Install the Door Chime (Refer to Figure 1)
Position the chime as shown in Figure 1. (The chime base can also be installed in the horizontal position.) Route the wires as shown and install the chime using the screws provided.

Troubleshooting For Wired Chime
Chime Not Sounding
- Check that power to the chime is turned on.
- Verify Diode is attached securely to the Front Doorbell Pushbutton.
- Diode may be positioned at the wrong polarity. Reverse the diode.
- Verify all wires are securely fastened to terminals and that the wire is correct.

Chime Sounds Only When Keeping Pushbutton Pressed
- Reverse the direction of the diode on the Front Doorbell Pushbutton.

Wiring Instructions For New Installation (Refer to Figure 3)
1. Turn off the power supply.
2. Connect one wire from the Front Doorbell Pushbutton to the FRONT terminal of the Chime Base.
3. Connect the other wire to the FRONT Doorbell Pushbutton to one Terminal of the Transformer.
4. Connect the TRANS terminal of the Chime to the other Terminal of the Transformer.
5. If the Back Doorbell Pushbutton is used, connect one end of the wire from the Back Doorbell Pushbutton to the REAR terminal of the Chime.
6. Connect the other end of the Back Doorbell Pushbutton to the 1st Terminal of the Transformer.
7. Turn on the power to the doorbell.
8. Press the doorbell pushbutton. The chime should respond with a tone. If not, go to the Troubleshooting section.

Install the Front Doorbell Pushbutton (Refer to Figure 2)
A small electrical component called a ‘diode’ is supplied with the chime. Install the diode across the terminals screws of the Front Doorbell pushbutton as shown in Figure 2 & 3. Without this diode the chime will not work. Connect the wires to the Front Doorbell Pushbutton. Install the Front Doorbell Pushbutton in the desired location using the screws provided (No diode required).

Replacing a Wired Doorbell
1. Turn off the power supply.
2. Remove the decorative cover by simply pulling it away from the rear casing. When replacing the cover, simply press it back on the base.
3. Position the chime as shown in Figure 1. (The chime base can also be installed in the horizontal position.) Route the wires as shown and install the chime using the screws provided.
4. Connect the wires to the Door Chime.
5. Connect the doorbell pushbutton.
6. Connect the other end of the wire from the Chime to the Door Chime pushbutton.
7. Turn the power on.

TRoubleshooting For Wireless Chime
Chime Not Sounding
- Check that all batteries have been inserted correctly. The doorbell pushbutton LED light should come on when the push button is pressed.
- Chime may be positioned out of range of the doorbell pushbutton. Move your chime closer to the doorbell pushbutton.
- Note: During the programming cycle, the transmission range may be reduced and will resume optimum range after 2 minutes.
- A metallic object may be blocking the signal from the doorbell pushbutton. Experiment with the location of the chime to see if you can move it to a more suitable place.

The battery in the doorbell pushbutton or chime may need replacing. If the pushbutton LED light (B) flashes 5 times after being pushed, replace the battery.
- A metallic object may be blocking the signal from the doorbell pushbutton. Experiment with the location of the chime to see if you can move it to a more suitable place.

The doorbell pushbutton and chime haven’t been programmed. Reset the automatic programming of your chime and doorbell pushbutton by Pressing and holding down chime selection buttons A and B (Figure 5) for 5 seconds. The chime will sound all of the tunes available indicating the programming has been erased. Program the doorbell pushbutton following these installation instructions.
