

Office Seating

Cleaning.

1. Most spills should come right out if cleaned immediately. Remove as much surface stain as possible with a soft tissue or cloth. Be careful not to spread the stain.
2. Using a mixture of mild dishwashing soap, diluted about 20 parts water to 1 part soap, apply a small amount of liquid to the stain. Wait about three minutes, then rub with a soft cloth in a circular motion until the stain is removed.
3. Using water and a clean cloth, remove the soap. Pat the area dry with a soft cloth or air dry.
4. Brush the area in the direction of the nap to return the surface to its original condition.

Note: *Do not* use solvents, bleach, or cleaners with high PH solutions, as they will permanently discolor the fabric.
