

LIGHTS FAST - Just light the wrapper

ALWAYS START WITH TWO LOGS.

NOT INTENDED AS A SINGLE LOG FIRE.

INSTRUCTIONS

FOR USE IN OUTDOOR WOOD BURNING FIRE PITS, FIREPLACES & CAMPFIRES.

Can also be used in indoor, open hearth fireplaces.

- Without tearing, carefully pull on seams of the wrappers to separate it from the log and create an airspace.
- Stack two (2) logs in an X configuration on the grate of a fire pit, fireplace or on the base of a campfire pit or fire ring. Place the logs so the arrows are pointing down.
- Light seams of the wrappers at the arrows.
- For best conditions for roasting, wait until the fire begins to die down some (after about 45-60 min.) when some hot coals are present.
- Always use a metal fireplace screen while burning indoors. If fireplace has glass doors leave doors open while burning.
- Add an additional log (**ONLY ONE**), if desired, after about 1.5 hours and flames from the first logs have begun to diminish. Additional logs may be added to extend the fire, but never add more than **ONE** log per hour.
- Careful adjustment of the logs with a fireplace tool is acceptable but make sure no burning particles stick to the tool.
