### DEADBOLT INSTALLATION

#### Select Proper Backset
- The backset is the distance from door edge to center of deadbolt cylinder hole.
- Latch can be adjusted to fit either 2-3/8" (60 mm) or 2-3/4" (70 mm) backset. The latch is pre-set at a 2-3/8" backset from the factory.

To adjust backset from 2-3/8" (60mm) to 2-3/4" (70mm):
1. a) Retract latch bolt.
2. b) Hold latch faceplate in the left hand and latch tail in the right hand.
3. c) Twist latch faceplate clockwise (towards you) about 1/8 of a turn.
4. d) Pull latch faceplate towards left until it stops.
5. e) Retract counterclockwise back into position so that locking notch is engaged in hole marked "2-3/4".

To adjust the backset from 2-3/4" (70mm) to 2-3/8" (60mm):
1. a) Retract latch bolt.
2. b) Hold latch faceplate in the left hand and the latch tail in the right hand.
3. c) Twist latch faceplate clockwise (towards you) about 1/8 of a turn.
4. d) Push latch faceplate towards the right until it stops.
5. e) Retract counterclockwise back into position so that locking notch is engaged in hole marked "2-3/8".

#### Select the desired faceplate.
- a) Determine appropriate faceplate design (square or rounded corners) to match faceplate cutout in door.
- b) If desired faceplate is not already on latch, remove existing faceplate by separating faceplate from latch and "snap" on desired faceplate.

#### Install the Latch.
- a) Insert latch into side hole of door making sure that the "cross" shaped crank is located at bottom of the latch.
- b) If desired faceplate is not already on latch, remove existing faceplate by separating faceplate from latch and "snap" on desired faceplate.
- c) Twist latch faceplate clockwise (towards you) about 1/8 of a turn.
- d) Push latch faceplate towards the right until it stops.
- e) Retract counterclockwise back into position so that locking notch is engaged in hole marked "2-3/8".

#### Install the Anti-Pry Shield.
- a) Insert the anti-pry shield into deadbolt hole from EXTERIOR SIDE of door.
- c) Insert the anti-pry shield into deadbolt hole from EXTERIOR SIDE of door.
- d) Push latch faceplate towards the right until it stops.
- e) Retract counterclockwise back into position so that locking notch is engaged in hole marked "2-3/8".

#### Install the Torque Blade.
- a) Insert exterior deadbolt cylinder through the hole in the door and flush against the door, making certain that the torque blade is properly positioned in the latch crank. THE TORQUE BLADE SHOULD BE INSERTED HORIZONTALLY THROUGH THE LATCH CRANK WHEN THE LATCH IS IN THE RETRACTED POSITION. Tapped holes in the housing of the exterior cylinder should be lined up with the screw holes. The keyhole will be in the down position.

#### Install the Interior Thumb-turn Mechanism.
- a) Position Thumb-turn mechanism onto torque blade and push them against shelf.
- b) For thinner doors, it may be necessary to shorten the length of the torque blade. To shorten, break torque blade at the pre-notched location on blade.
- c) Insert two 3/4" (19mm) long machine screws (S2) through holes in the Thumb-turn engaging holes in the exterior cylinder and tighten firmly.

#### Install the Outside Cylinder Housing.
- a) Install 4-hole reinforcement plate using two 1-1/2" (38mm) long wood screws (S3). Install 2-hole strike plate cover on top of reinforcement plate using two 3/4" (19mm) long wood/machine thread screws (S3).

#### Install the Reinforcement Plate.
- a) Install 4-hole reinforcement plate using two 1-1/2" (38mm) long wood screws (S3).
Included Hardware for Handleset Deadbolt Installation

**S1**
3/4" (19mm) • Qty 2

**S2**
1-1/2" (38mm) • Qty 3

**S3**
1-1/2" (38mm) • Qty 2

**Handset Strike Plate**

**Handset Latch (2-3/4" Backset)**

**Handset Latch (2-3/4" Backset)**

**Screw Cover**

**Beveled Washer**
