

INSTRUCTION GUIDE

PLASTIC CLEANOUT PLUG

Oatey

1 Ensure threads on cleanout are clean and free of debris.

2 Apply an approved Oatey thread sealant to the threads of the Plastic Cleanout Plug.

3 Screw the Plastic Cleanout Plug into the cleanout opening until hand tight.

4 Using a pipe wrench or adjustable split ring pliers, finish tightening the Plastic Cleanout Plug in place.

5 Test to verify that the installation of the Plastic Cleanout Plug has created a watertight seal. Run water from the nearest fixture on the same pipe run that the cleanout is located and visually inspect for leaks.

6 If a leak occurs repeat steps 1-5 until a watertight seal is achieved.
