

# CAST IRON TUB FACTS & CARE

Our cast iron tubs are produced from solid quality cast iron billets to an average thickness of 3/8". They are covered with a ground coat, followed by 3 layers of Class AA High Grade covercoat enamel. Each coat is fired at 900°C, resulting in a luster that should remain unfaded for at least 10 years. Tub exteriors are finished with 2 coats of paint over a layer of anti-rust primer. You can expect 50 years of service from your cast iron tub with proper care. Our tubs are subjected to a rigorous inspection process before being packed in our specially designed shipping containers to ensure that they are delivered to our customers in pristine condition.

## Care and Maintenance

To maintain the luster of your cast iron tub, we recommend using a mild, non-abrasive cleanser for regular cleaning. The porcelain interior should be towel dried after each use. Bon Ami® or Zud® are more powerful non-abrasive cleansers that may be used for tougher cleaning, such as soap scum, minor rust stains or hard water deposits. To prevent the accumulation of standing water under your tub base be sure to seal between the base and floor with a bead of silicone.
