

Air Scrubber Introduction

- XPOWER's unique and highly innovative Air Scrubbers create a fresh and clean environment for various purposes.
- With a special designed powerful motor, XPOWER Air Scrubbers are able to provide suction in even difficult areas.
- The included filtration system can capture a wide range of compounds and prevents organism migration from location to location.

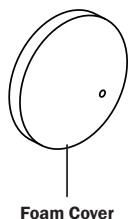

Installation and Operation Guide

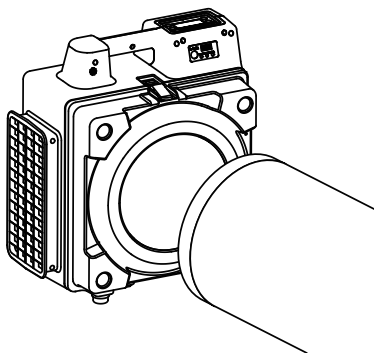

Selecting a Location (Important)

- **Enclosed Area:** For optimal efficiency and longer filter lifespan, the Air Scrubber should be operated in an enclosed area. Keep all doors, windows and other outside entrances to the room closed.
- **Air Circulation:** It's suggested to have a constant efficient air circulation inside your working area. You may achieve this with XPOWER Air Mover combinations.
- **Environment Humidity:** For optimal efficiency and higher filter lifespan, the Air Scrubber should not be operated in an environment with a high relative humidity level. High humidity level could cause blockage and damage to filters.
- **Power Cord:** The power cord has a length of 13 feet (4.0 meters). Select a location where the power cord can reach the power source.
- **Inlet and Outlet Orientation:** Also pay attention to the orientation of the air inlet and air outlet. Make sure the airflow won't influence any object nearby the Air Scrubber.
- **IMPORTANT:** The effectiveness of the Air Scrubber can be influenced by different factors. You may also find that installing multiple Air Scrubbers may be required for larger enclosed areas.

Extension Setup (Optional)

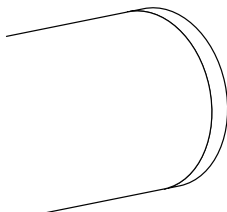

Foam Cover

Intake Ducting

- Turn off the machine and remove the foam cover*.
- Attach the ducting hose to the intake.

* For model X-2700 only.

Exhaust Ducting

- Turn off the machine.
- Attach the ducting hose to the exhaust.
