

Window films Cleaning Tips

There are several tips to consider when cleaning your windows with window films on.

- You need to make sure the film is not damaged.
- Use clean water or just a drop of dish soap with water works great.
- Use a soft microfiber cloth to gently wipe down the window in one direction.
- Use a Mr. Clean sponge and water to wipe the window and leave it sparkling clean.

It's also better to use soft cloths when cleaning tinted windows instead of paper towels. A paper towel will often leave bits a fiber on the window and it's hard to get a streak-free shine.

Window Films Do's and Don'ts

- **Don't** use ammonia or other harsh chemicals.
- **Do** use a chemical cleaner that states it's safe for window film.
- **Don't** clean the windows right after having film installed
- **Do** use soft cloths and squeegees to clean tinted windows.
- **Don't** use razor blades, scrapers or abrasive cleaning compounds on the windows films.
