Inverter Technology

Unlike traditional microwave heating systems that pulse on and off, the inverter creates continuous, constant, even heat to maintain exact temperature during the cooking, reheating or defrosting process.

Sensor Cook and Sensor Reheat

A built-in humidity sensor ensures that your food is never under- or overcooked. For precooked dishes, Sensor Reheat stops automatically when food is hot and ready to eat.

Easy To Use Control Panel

Intuitive controls make everyday use easy.

Express Knob

Simply turn the knob and start cooking.
