

Directions for Use

54 in. Heavy-Duty Tomato Cage

Designed to support tomato plants, peppers, climbing flowers, and other garden vegetables throughout the growing season.

Instructions

Select a Location

Choose a sunny, well-drained spot in your garden or raised bed where your plants will have room to grow.

Prepare the Soil

Loosen the soil and plant your tomato (or other plant) seedling in the center of the chosen area.

Insert the Cage

Position the cage immediately after planting to avoid damaging roots later.

Gently press the three legs of the cage into the soil, one leg at a time, until the bottom ring is stable and evenly seated. Ensure the cage stands upright and centered over the plant.

Guide Plant Growth

As the plant grows, guide the stems and branches through the rings of the cage for proper support.

Adjust branches regularly to prevent breakage and promote upright growth.

Maintenance

Check periodically to ensure the cage remains upright and secure.

After the growing season, remove the cage, wash off soil or debris, and store in a dry area to prevent rust or wear.

Tips for Best Results

Install early in the season while plants are small.

For taller or heavier plants, anchor the cage deeper into the ground for added stability.
