

Tips for Choosing LED Bathroom Mirrors

Q: Is the brightness of the light important ?

A: Bright enough light is the essence of led bathroom mirrors in daily use, and it can bring an effortless makeup experience without turning on other lights. Lack of sufficient brightness, the led mirror is just a decoration!

Q: Why do you have to choose three switches?

A: Brightness adjustment & light on/off switch: NiteCore Extreme is the key for the mirror to adapt to various usage scenarios; Short press the button can also control the light switch. Combined with independent defogging switch design, the defogging and lighting functions can be separated, reducing power waste and avoiding mirror damage caused by prolonged use of defogging. No longer worry about whether to forget to turn off any functions.

Q: Is the wall switch & memory function an essential function?

A: In daily use, you may have a fixed need for the light and brightness that you feel most comfortable with. The memory function can help you remember your usage status, saving a lot of tedious operations for each repeated adjustment. The wall switch control is also designed in line with daily usage habits, you can turn on/off the mirror easily when entering and leaving the bathroom through the wall switch, and there is no trouble with wet hands.

Q: Is front and rear light transmission important?

A: Front light transmission is the crucial fill light for makeup and shaving, its importance is self-evident, so a mirror with front light transmission is the best choice for LED bathroom mirrors. The backlight aperture is the key to creating an elegant atmosphere, and the led mirror without backlight function will lose the soul of beauty.

Q: It is best to choose a brand that is easy to maintain when choosing a mirror ?

A: The mirror is the focal point of a bathroom, but it is also a semi-electronic product, and there may be some use problems, such as failure of lights and buttons after two years of use. Hiring a repairman or repurchasing one will be a big expense if you can't simply repair it yourself. So it's better to buy branded products that can be repaired very simply, and you'll save a lot of money.

Q: It is best to buy led mirrors that fit perfectly with the wall (trouble with mirror being pushed up) ?

A: There are two solutions to solve the problem that the mirror and the wall do not fit well due to the wire against the mirror : one is to not add the mirror back plate , and the defogging film is exposed to the outside ; The other is to design a sunken back plate on the aluminum alloy profile, and open the wire groove through CNC technology. Keeping the wall and mirror fit is an important detail that many other products overlook.

Q: Does the led light strip need a waterproof silicone cover?

A: In a high-humidity bathroom or high-salt seaside bathroom, if the LED strip is directly exposed, it will easily cause damage to the strip and potential safety hazards. The most sensible choice is to choose a led light strip with a waterproof silicone cover. Safety and longevity are guaranteed.

Q: What kind of mirror is a good mirror ?

A: The copper-free silver-plated mirror has a high fidelity of 95-97%, highly displays the real skin tone, and presents the most realistic makeup effect. However, the fidelity of those aluminum-plated mirrors made at low cost will be reduced to 85~92%, which will make you look pale, and the makeup will not match the reality! And the mirror is prone to oxidation.

Q: How to choose the button background color?

A: Highly reflective colors (eg blue, red) may affect the sleep and mood of light-sensitive people. The warm yellow key background color can bring great visual comfort.

Q: How to choose the size of the mirror?

A: It is recommended that the width of the mirror be flush with the width of the washbasin (within 90cm). If your sink is large or has two sinks, in order to show a sense of spaciousness, it is recommended to choose the largest size possible (bathroom mirror with the largest defogging area as possible).
