

How To Plant And Care For Your

- 1 DIG** Dig a hole the same depth as the root ball but twice the width. For example, a root ball that's 6 inches in width would need a hole that's 12 inches in width.

- 2 PLACE**

Remove your plant from its shipped container and place it in your hole. If your plant is in a burlap sack, keep the burlap on.

- 3 FILL** Once you've placed your plant, backfill the hole with dirt and gently tamp down the soil to remove air pockets.

- 4 WATER**

Finally, water the surrounding soil to settle your plant's roots, and water your plant weekly until it's established. You may need to water your plant more during times of drought or extreme heat.
