

# ECO WOOD TREATMENT

We are very excited to announce the availability of Eco Wood Treatment to the public. A new, easy-to-use treatment that naturally beautifies any wood project.

This product is unique to the world of stains. In this age of concerns about our environment, both consumers and contractors are very receptive to products that are non-toxic and friendly to nature.

## Tried & Proven Formula

Eco Wood has been treating marinas, houses, & decking for over 50 years with a recipe handed down through three generations of wood-working craftsmen.

## For All Outdoor Wood

An all-purpose treatment for new

## No Maintenance

No need to ever scrape, re-stain, or worry about fading or wear

## Non Toxic

Eco Wood is friendly to plants, animals, and people. Can be used in direct contact with garden soil.

Eco Wood Treatment is a proven non-toxic wood preservative that prevents the white rot fungi, a common type of wood decay.

## Easy to Use

Just add powder to water, stir and apply.

## Beauty

One, easy application: brush, roller, or spray. Eco Wood enhances the natural beauty and grain of all types of wood. The initial colour ranges from grey to light brown to olive brown, depending on wood type, texture, and dryness. The natural colour matures to a beautiful silver patina. Natural weathering effects of sun, snow, and rain actually improve the qualities of Eco Wood.

# PRODUCT INFORMATION

Heightened concerns about our environment and the protection of our natural resources are apparent everywhere, and the availability of this product is truly, good news. Users of Eco Wood Treatment will save time & money while lessening the harmful impact on our soil, air, water, and forests.

Following are some frequently asked questions about Eco Wood Treatment, with some straight answers from the manufacturer.

**Q: *What is Eco Wood Treatment?***

A: Eco Wood is a highly effective wood treatment which beautifies outdoor wood for a lifetime of enjoyment. It is also a non-toxic wood preservative that prevents the white rot fungi, a common cause of wood decay.

**Q: *Many products claim to be safe to use, what makes Eco Wood so different?***

A: Over time and with exposure to the sun and rain, all Eco Wood treated wood, develops a beautiful silver - to dark brown - patina. This natural patina is a weathering process with a high UV protection.

**Q: *What is Eco Wood made of?***

A: Eco Wood is made up of naturally occurring plant & mineral substances, combined in a special family recipe. The solution soaks in and penetrates wood fibres. Independent laboratory testing confirms that Eco Wood creates no harmful residue in soil or water.

**Q: *Lots of products for the exterior wood claim to be no maintenance, but in fact have to be re-applied within 2-3 years. What does Eco Wood mean by no maintenance?***

A: No maintenance means you apply one treatment of Eco Wood and **never** touch it again. Eco Wood can not be worn off, will not peel or fade (natural weathering actually increases its beauty & effectiveness).

**Q: *Is Eco Wood good for most types of wood?***

A: Absolutely. Eco Wood Treatment works on all wood, just apply to bare untreated wood. It is effective for outdoor or indoor wood applications like: decks, fences, siding, flower pots, picnic tables, furniture, raised planters, birdhouses, siding, doors, windows, gazebos, shake roofs, timber construction, log homes and even floating rafts and marina docks.

**Q: *How is Eco Wood Applied?***

A: It can be applied in all conventional ways including by brush, roller, sprayer, or dipping. It can be safely worked while still wet without leaving permanent finger or foot marks, and can be applied in any weather, even 0 degrees Celsius.

**Q: *How long is its shelf life?***

A: In powder form, Eco Wood can be stored indefinitely. After mixing with water, the solution

keeps best in a sealed jar, and will last a very long time. With increased time, however, water may become stagnant unless distilled water is used to mix the batch. Because you can mix only what you need, the likelihood that you will have large amounts of Eco Wood solution left over is minimized.

**Q: *Will Eco Wood prevent wood from cracking & warping?***

A: All wood contains moisture and dries during exposure to sun & wind. Eco Wood will not cause additional cracking or checking in the wood.

**Q: *It sounds expensive. Is it?***

A: No. In fact, Eco Wood is priced below several nationally advertised stains and wood treatments that must be applied many times over the life of the wood. Eco Wood is simply the least expensive and most effective wood treatment available. Shipping and handling costs have been greatly reduced because Eco Wood is purchased in powder concentrate form, and these savings are passed on to the user.

**Q: *Can I apply sealers or colored stains over Eco Wood?***

A: Yes you can.

**Q: *Can Eco Wood Treatment be tinted?***

A: Yes. Any water-based tint can be added to Eco Wood Treatment for any colour needed.

**Q: *Who is using Eco Wood Treatment?***

A: Contractors have been using it for 60 years in house and marina construction. Parks Canada has been using Eco Wood for over 20 years, treating outdoor wood in several of our National Parks, including Banff, Kootenay & Yoho. They highly recommend the product. The British Columbia Ministry of Transportation approves Eco Wood for municipal and highway signage projects, the City of Calgary is using Eco Wood for treating wooden roadside sound barrier fencing, and Nova Scotia Natural resources is testing the product on picnic tables in Provincial Parks. Several construction contractors and log home builders are now using the product in Canada and the United States.

please note - do not use any wood cleaners, brighteners or Bio washes before applying Eco Wood Treatment.
