

SOWSUN SOLAR PATHWAY LIGHT

HOW SOLAR LIGHT WORKS:

During the day, the solar panel converts solar power into energy and stores in the rechargeable battery. At night, the light turns on automatically and uses energy stored. The duration of illumination depends on the geographical location, weather conditions and seasonal light availability.

CHOOSING AN IDEAL LOCATION:

Choose an outdoor location where the Solar panel can receive at least 6 hours full and direct sunshine each day. The bright light sources may cause the solar light turning off automatically. Sowsun Solar lights are ideal for night time lighting in the garden, lawn, etc. You can also place the solar lights outdoor during the day and then place them indoor for lighting. If the soil in your garden is quite solid, we recommended that you should make a hole on the ground before inserting the spike.

ATTENTION FOR FIRST TIME USE:

Twist-off the lip, and turn the ON/OFF switch to "ON" position, the light sensor will control the light automatically. When the environment turns dark, the solar light will turn on and use the energy stored in the battery. If the solar light does not turn on automatically at night after 6 hours of charging during the day, please check the Following:

- (1) Make sure the power switch is at the "ON" position.
- (2) Check the battery and make sure the battery contacts the terminal securely.
- (3) Make sure the solar light is located in a sunny location and the solar panel can receive direct sunlight.

PRECAUTIONS:

- (1) Please note, the solar light is designed to work when the environment gets dark. If there are strong sources nearby, the solar light may not illuminate or light up at all.
- (2) Although the battery has been charged by the manufacturer, the electric charge may have dropped by the time consumer receives the product. Please let the solar light charge for a full day for the maximum performance.
- (3) Surface of the solar panel must be keep clean. Dusty surface will reduce charging efficiency.

REPLACE BATTERIES:

If the solar light stops working after it has been used for a long time, the battery may need to be replaced. You may open the battery cover and replace it with a new rechargeable battery.
