

Cleaning and Maintenance for Colored Stainless Steel – BLACK | COPPER | GOLD

Stainless Steel in **Colors ONLY**

Do NOT expose colored stainless-steel sinks to harsh chemicals such as bleach, ammonia and acidic cleaners.

Doing so can harm your sink and will void the warranty; Soap, water and soft sponge/cloth ONLY!

Care: Avoid overloading sink with too much weight, it could damage your sink. Avoid using hard metal brushes like Brillo pads. Avoid leaving food waste and dishes in sink for prolonged periods of time, it'll make cleaning it much more tedious. Dry sink with microfiber cloth after you've cleaned and are done using it.

Cleaning: Regularly rinse away residue in your sink and prevent scratches by using a sink grid instead of a rubber mat in your sink.

Sanitizing Tip: You can dilute bleach or vinegar in water with a 1:32 oz ratio in a spray bottle and spray the sink, but immediately rinse afterwards. No Soaking or using it in concentrated form directly on surface.

Instructions: Douse your sink with water and lightly lather it with a soft sponge and mild soap detergent. Make sure your soap doesn't contain acidic additives or bleach. **NEVER** Brush against the grain, this helps to avoid any noticeable scratches against the finished brushed strokes. Rinse immediately after lather with clean water and dry with a microfiber cloth to prevent any water spots from forming when dried.

Thank you so much for taking the time to read this. We hope you love your New Stainless-Steel Kitchen/Bar Sink(s) in Colors. Don't Forget to register your product(s) online within 90 Days of purchase to be covered under our Limited Lifetime Warranty.
