GROUT

USE AND CARE MANUAL

After grout has completely cured, for daily cleaning, use a neutral pH, water-based cleaner designed to be used for ceramic tile. Periodically or when grout joints appear soiled, a mild abrasive everyday household cleaner with bleach may be used. Apply cleaner with bleach directly on the grout joint and allow it to sit for approximately 5 minutes. Then, gently scrub the grout joints with a white scrub pad, rinse and allow to dry. DO NOT use undiluted bleach or other harsh chemicals. The use of "No Rinse" and/or acid base cleaners are not recommended.
