

Oraa Side Table PROPER CARE AND TREATMENT

We want your side table to last as long as possible, so we recommend that you tighten screws within the first two weeks after assembly. For added safety, check the tightness of all screw every two months.

Wood:

Avoid cleaning MDF (*Medium-density fiberboard*) material with water. When necessary, clean the surface with a slightly wet cloth and immediately dry thoroughly. For that hard to remove residue, use a small amount of mild soap. Do not use bleach or any wood treatment.

Steel:

Wipe up spills as they happen with a damp cloth and wipe dry. Avoid abrasive cleaning solutions, chemical solvents, strong detergents, cleaners with bleach, or furniture polish.

Fabric:

During spills, dry with a paper towel to absorb as much liquid as possible using a regular dab. If you still see stain when it dries, pull out grandma's tricks: use soda water and salt or better yet get a suitable cleaning solution.

There's a thin piece of MDF board in the bottom of the fabric basket so it's not washer friendly.
