

VACUUM FILTER USE & CARE MANUAL

HOW DOES IT WORK? – Vacuum filters are one of the components responsible for extending the life of your vacuum cleaner by keeping dirt and debris from the internal unit. In turn, this improves the suction and effectiveness of your vacuum. If you want your unit to maintain peak performance, the prevention of particle build-up in the system is essential.

This filter collects fine airborne particles and irritants that contaminate the air. Fine particles get recycled back into the room while you vacuum, but a vacuum filter traps the particles and keeps them from escaping. Improve the quality of your environment and simultaneously filter the air while you vacuum!

Replacement Vacuum Filters

EXTEND
VACUUM LIFE

IMPROVE
VACUUM POWER

PROMOTE
HEALTHY LIVING

PROPER MAINTENANCE

How often should you replace a vacuum filter?

This will always depend on how often it is used, and the quality of the air. In highly polluted environments, a vacuum filter will need to be replaced more often than normal.

The standard replacement frequency for a vacuum filter is about once per season. Every 3 months they should be replaced, but they can be replaced as early as 1 month, and some of them as late as 6 months! Be sure to check the quality of the filter regularly.

CARE TIPS:

- Depending on use and air quality, replace filter every 1-3 months for optimal performance.
- Check the quality of the vacuum filter before you start vacuuming.
- Filter can be washed by hand gently, under warm water.
- If you wash filter, be sure to let the filter dry completely before re-installing.

INSTALLATION HELP NEEDED? Please note that we only have knowledge on replacement filters, not the vacuum cleaner units. If you need help with installation, it is always advised to please contact your vacuum cleaner brand/manufacturer for further assistance. They are the experts on their products and can give you the correct advice. We are not affiliated with any name brands. We apologize for the inconvenience!
