

Weather Durability

RAIN

Heavy rain? No drain?
No prob!
Our AC has a built-in pitch to aid with drainage of excess water.

Pro Tip :

Make sure you install the AC with a 1/4 " downward pitch (per the installation guide).
You can also manually drain any excess water (find a helper and secure the AC before tilting it downward).

HEAT

High temps?
The Windmill AC has a UV-resistant coating and can withstand high heat environments.

Pro Tip :

For optimal cooling and performance, install your AC in a shadier window.

SNOW

Our double-side insulation protects you and your home from cold drafts.
Winter covers for additional protection are also available.

Pro Tip :

Do not use your AC in freezing temperatures - it could break the unit.

WIND

Once your unit is securely installed per the instructions, you are good to go.

Pro Tip :

Double check your AC is properly secured to the window frame per the installation guide.
Use the included sash lock to keep your window locked.
