

## What are the benefits of using static cling window films?

### Static cling window films provide;

- **Privacy** Ideal for overlooked windows or to block out unpleasant views with no loss of light
- **Protection** 95% UV protection which helps prevent fading of carpets, furniture and soft furnishings
- **Decoration** Add décor to plain glass quickly and easily

## What surface can they be applied to?

Clean, flat glass surfaces such as windows, glass doors and even on the outside of shower screens.

## What tools do I require to apply the film?

Scissors, d-c-fix® application kit (which contains craft knife and smoother with a felt edge), tape measure, water spray bottle, clean cloth.

## How does the product stick to the glass?

The film has a static side which, when peeled away from its backing paper, adheres to the glass. Water is used to slide it into position which later dries out to leave the film in place. It is important to ensure the whole area of film is in contact with the glass which is why it is recommended to cut the film slightly smaller than the glass area to avoid overlapping on to window seals.

## Can the film be re-used?

Yes, the beauty of static cling window films is that they can be peeled off without leaving any residue and re-applied using water.

## How do I clean the film?

Simply wipe clean with a damp cloth or use a non-abrasive detergent.
