

- Wood bracing or blocking is prone to shrinking
- Wood bridging can cause squeaking over time
- Often installed poorly & offers minimal benefits
- Wood solutions are non-interlocking and offer no seismic or structural benefits

Standard Wood VS

- Will NOT shrink and helps reduce bouncing, speaking and creaking
- Helps to evenly distribute weight across joists
- Structural and seismic preventing joist roll over
- Structurelock is made from 100% recyclable steel

ONLINE ORDER PROCESS

1. Select Product

2. Choose product specs

Next Generation Structural and Seismic Bracing

Structurelock offers an innovative and proprietary structural, seismic and interlocking, universal steel bracing system for both dimensional and engineered I-joist construction.

We use a proprietary method of manufacturing and distribution that results in local production, enabling quick delivery of small to large orders.
