

WALL ART PANELS INSTALLATION INSTRUCTION

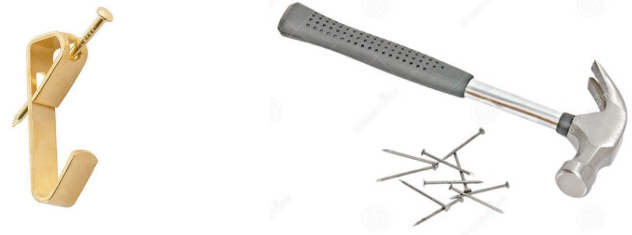

1. Select any configuration of the wall art panels on the wall: one line, square, abstract, etc.

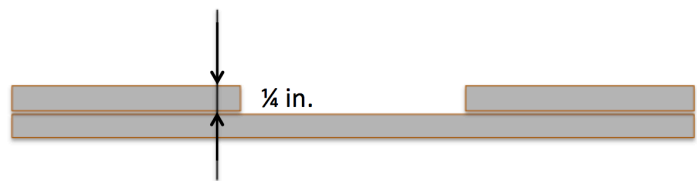

2. Using a level, draw a line on the wall or mark the position for the top edge of the panels.

3. Use 1 in. or 1.25 in. long standard nails # 16 or # 14, or use standard hooks for artworks. Step down 5 inches from the top edge mark of the panel and position the nail or hanger in the potential middle of the panel.

4. Please consider the following:
 - The thickness of the backing planks is approximately $\frac{1}{4}$ inch, so ideally the hook or nail should be protruding at $\frac{1}{4}$ inch from the wall.
 - The weight of one panel is 2 lbs.
 - If you consider using panels as a substrate for some objects with the additional weight, hook panels on two nails or hooks. It's especially important if the weights of the objects are off-center.

5. To attach photos to the wall art panel use paper pins as an option.
