

Heavy Duty Nylon Bird Netting Installation

Instructions

1. Prep Work

Check the package: Ensure you have the nylon bird netting, 50 cable ties, and 12 stakes. Measure the area to cover (e.g., fruit trees, blueberry bushes, koi ponds, chicken coop runs). Cut the netting to the needed size with scissors—no fraying will occur.

2. Installation

- For trees/shrubs: Drape the netting over the plants. Secure the edges to branches using cable ties.
- For fences/ponds: Fasten the netting to fences or surrounding structures with cable ties. Use stakes to anchor the netting's bottom to the ground (prevents animals from sneaking under).
- For chicken coops: Cover the run area, securing the netting tightly to avoid gaps.

3. Note

The 2.4-inch mesh protects plants without harming birds/small animals. Reuse season after season—store the netting properly when not in use.
