Meet Nest Protect.

When Nest Protect has something to say, it uses words and colors instead of just beeping.

Watch our video to see how it all comes together: nest.com/protect

Lighting
- Blue: You’re setting up or testing Nest Protect.
- Green: Everything’s OK.
- Yellow: This is a smoke or CO warning before an emergency. If it glows yellow when you turn out the lights, one of your Nest Protects needs your attention.
- Red: There’s a smoke or CO emergency.

Speaker
Tell you what’s wrong in a human voice.

Horn
Alert you with a loud sound.

Next button
Press it once to quiet the alarm or twice to run a test.

Krafting
- Blue: You’re setting up or testing Nest Protect.
- Green: Everything’s OK.
- White: Nest Protect is lighting your way.
- Yellow: This is a smoke or CO warning before an emergency. If it glows yellow when you turn out the lights, one of your Nest Protects needs your attention.
- Red: There’s a smoke or CO emergency.

Meet the Nest app.

Know from anywhere
Nest Protect will send you an alert when something’s wrong. You can also take a look at the battery and sensor status at any time.

Alerts include:
- Emergency Alarms
- Heads-Up alerts
- Low-battery
- Sensor issue

Quiet things down
If you’re home and there’s a false alarm, you can use the app to hush your Nest Protect.

Emergency contact
Add a phone number that will pop-up if something goes wrong.

Safety History
From the alarm going off to Pathlight turning on, you’ll see what’s happened over the last 10 days.

What to do
Learn about the symptoms of carbon monoxide (CO) poisoning and how to stay safe if there’s a fire.

Meet Nest Protect. Meet the Nest app.
There for you.

Set up and test
Nest Protect glows blue during setup and testing. Use the Nest app to set up Nest Protect where it will be. The app is available for both iOS and Android.

Once your alarms are set up and installed, run a manual test by pressing the Nest button twice. All the alarms in your home will test themselves and let you know everything’s working well.

A light in the dark
Nightly Promise
Nest Protect constantly checks its sensors and batteries. When you turn off the lights for the night, look for a quick green glow — that means it’s working. Sweet dreams.

Pathlight
When it’s dark, Nest Protect lights your way as you walk underneath it. To see how often Pathlight is turning on, check the Nest app. If your Nest Protect is wired, you can set Pathlight to Always On and it will glow whenever the room is dark.

Thinks before it speaks
Nest Protect gives you a friendly Heads-Up before it sounds the alarm. The light ring pulses yellow and calmly tells you what the danger is and where it is.

They talk to each other
If one Nest Protect senses danger, every Nest Protect in the house speaks up. So the Nest Protect in the bedroom can tell you if there’s smoke in the living room.

Quiet it down
Simply press the Nest button or use the app to silence Nest Protect. Hushing the Nest Protect that detected the problem will also hush the others.

Safety History
It’s hard to remember what happens in an emergency. So Nest Protect does it for you. The Nest app shows you the last 10 days worth of Heads-Up alerts and Emergency Alarms. That way you can see peak CO levels so you know how serious things were.

There’s carbon monoxide in the living room.

Heads-Up. There’s smoke downstairs.

Pathlight:
When it’s dark, Nest Protect lights your way as you walk underneath it. To see how often Pathlight is turning on, check the Nest app. If your Nest Protect is wired, you can set Pathlight to Always On and it will glow whenever the room is dark.

‘Emergency. There’s carbon monoxide in the living room.’

‘Heads-Up. There’s smoke downstairs.’

Pathlight:
When it’s dark, Nest Protect lights your way as you walk underneath it. To see how often Pathlight is turning on, check the Nest app. If your Nest Protect is wired, you can set Pathlight to Always On and it will glow whenever the room is dark.
