## SAFETY INFORMATION

Never use the torque wrench with the power off. Always turn on the torque wrench so the applied torque is measured.Do not press any key while torque is being applied.Do notuse electronic torque wrench to loosen fasteners.Verify the calibration ofthe wrench ifyouknow or suspect its capacity has been exceeded.Periodic recalibration is required to maintain accuracy.Never apply moretorque than the maximum wrench capacity or the maximum fastener specifications.Donotimmersein fluids.Donotuseonlive electrical circuits.Electrical shock can cause injury. Rubber handle is NOT insulated.
## WARRANTY

## LIMITED LIFETIME WARRANTY WHATISCOVERED

Ifthis Husky product ever fails dueto a defect in material or workmanship, return the productto any Home Depot retail store for replacement with anitem of equal or greater value.

## WHATISNOTCOVERED

This warranty excludes incidental/inconsequential damages and failures due to misuse, abuse, calibration or normal wear and tear. This warranty gives you specific rights, and you may also have other rights, which vary from state to state. Contact the Customer Service Team at 1-888-43-HUSKY orvisitwww.HUSKYTOOLS.com

## POWER (ON/OFF)

## POWER ON

1. Verify torque is notbeing applied to the wrench. Press " ${ }^{\text {C }}$ " for 1 second. Wrench will beep once.
2. The wrench will defaultto Peak Torque Mode. The last unit of measurement and lasttorque setting will display.
3. Thewrenchis ready touse.

## POWER OFF

1. Ifno torque is applied, wrench willshut off automatically after 180 seconds.
2. Toshut off manually, verify torque is not being applied then press " $\frac{C}{\mathrm{C}}$ " for 3 seconds.

## SETTINGS

## HOWTO CHANGEUNIT OFTORQUE MEASUREMENT

1. Poweronthe wrenchas describedonPage3. Press"UNI" repeatedlyto selectone ofthe fivetorque measurement options: Ft-lbs., In-lbs., Nm, Kg-m or Kg-cm
2. The wrench is ready to use.

## HOW TOSET MODE

There are four mode options: $\mathrm{P}=$ Peak Torque (default), $\mathrm{A}=$ Angle, $\mathrm{PA}=$ Peak Angle, $\mathrm{PCt}=$ Target Torque Alert Setting

1. Power on the wrench as described on Page 3. Press " M " repeatedly to scroll through the different modes. "SEL" will show atthetop ofthe screento indicatethe mode being selected.
2. Press"SET"toselectthenew mode. The screen willshow the lastsetting for the mode selected.
3. The wrench is ready to use.

[^0] unchanged.

## HOW TO SET TARGETTORQUEIN "PEAK TORQUE" MODE

1. Power on the wrench as described on Page 3. Press "SET". The current torque setting will display, the "tor" sign will flash on the screen.
2. The unitof torque measurementcan alsobe adjusted atthis time. Press "UNI"to change itif required.
3. Press "up" or "down" to select the torque value, then press "SET" to confirm the value.
4. The wrench is ready to use.
5. Apply torque and rotate the wrench at a constant moderate speeduntilalertedto stopby the handle vibration, beeps and LCD display. The LCD screen alternates red/green when the "target torque alert" warning starts. When the target torque is reached the LCD Screen shows solid red.

Note:Afterreachingthetargettorquethe display will flashfor 10 seconds, thendefault tothelastsetting. The next measurement can be taken while the screen is flashing by applying force again, or by pressing $\frac{\oplus}{\text { © }}$ "to return tothelastsetting.

## HOWTO SET ANGLE

4. Poweronthe wrenchas described on Page3.
5. Press "M" until the "A" mode is reached, then press "SET".
6. The screen will display the lastangle value set.
7. Ifdesired angle is displayed, the wrenchis ready to use.
8. If you want a different angle, press "SET" again to change the angle degree. Press "up" or "down" to get to the required angle, then press "SET".
9. The wrench is ready to use.
10. Apply torqueandrotatethe wrenchataconstantmoderate speed untilalertedto stopby the handle vibration, beeps and LCD display.
11. Totake the next measurement press " ${ }_{C}$ " or wait until the display stops flashing.

Note:After reaching the target angle the display will flashfor 10 seconds, then default to the lastsetting.

## SETTINGS

## HOWTO CHANGE "TARGET TORQUE ALERT" AND "TARGET ANGLEALERT" PERCENTAGES

1. Power on the wrench as described on Page3. Press"M" untilthe "PCt" mode is reached, then press"SET".
2. Thecurrentvalue willdisplay onthe screen.
3. Press "up" or "down" to select when the target torque alert will start. The target torque alert can start at a maximum of $50 \%$ to the target torque value or a minimum of $15 \%$ to the target torque value. For example, if your target torque is 100 ft -lbs and your target torque alert is set at $50 \%$, the alert will start when you reach 50 ft -lbs. Press "SET" to save.
4. The screen willshow "Ang"sothe targetangle alertcan be adjusted.
5. Press "SET" to change the target angle alert setting. Press "up" or "down" to select when the target angle alert will start. The target anglealert can start at a maximum of 90 degrees before the target angle or a minimum of 15 degrees before the target angle. Press "SET" to save.
6. The wrench is ready to use.

## HOWTOUSEPRE-SETTORQUEVALUES

1. Power on the wrench as described on Page 3. Press "SET"then"M". The setting number willflashing at the top of the screenandthe torquevalue willbedisplayed.
2. Press "up" or "down" to select the desired pre-set torque value and then press "SET".
3. The wrench is ready to use.

## HOWTOCHANGEPRE-SETTORQUEVALUES

Pre-Set Torque Values can only be selected in Peak or Peak Angle modes

1. Power on the wrench as described on Page3. Press"SET" then"M". The Pre-Set number willflash at the top of the screen and the torquevalue will be shown.
2. Press "up" or "down" to select the desired pre-set torque value, then press " $M$ " for 1 second1.
3. Now the "tor" sign at the top of the screen will flash. Press "up" or "down" to select the desired torque setting, then press "SET". The new Pre-Set Value is saved into the Pre-Set options.
4. Press "SET" again to set the target torque to the new Pre-Set value.

## HOWTOSETTORQUEWITHANGLE

1. Poweronthe wrenchas describedon Page3.
2. Press "M" until the "PA" mode is reached, then press "SET".
3. Thescreen willshow lastangleand torquevalueset.
4. If the desired angle and torque values are displayed, the wrench is ready to use.
5. If you want a differenttorquevalue or angle, press"SET" again.
6. To change the torque value press "up" or "down" to get to the required value, then press "SET". The screen will show angle value with "Ang" sign flash. If the target angle value previously displayed is correct, pressc" to exit.
7. After setting the torque value, the screen willflash"tor". Press "up" or "down" changethe anglevalue to get to the required angle value, then press "SET" again.
8. The wrench is ready to use.
9. Apply torqueand rotatethe wrenchat a constantmoderatespeed untilalertedto stopby the handle vibration, beeps andLCD display.
Note: After reaching the target torque, the wrench will start recording the angle measurement. After reaching both the target torque and target angle, the display will flash for 10 seconds then default to the last setting. Totake the next measurement press "(D)" or wait untilthe display stops flashing.

## BATTERY

## LOW BATTERY

1. Whenthe remaining battery capacity is at $80 \%-100 \%$,the high battery icon will display.
2. Whenthe remaining battery capacity is at $50 \%-80 \%$, the mid battery icon will display.
3. Whenthe remaining battery capacity is at $10 \%-50 \%$, the low battery icon will display. The Electronic Torque Wrench will stillfunction, butthe battery will needto be replaced soon.
4. When the remaining battery capacity is at $10 \%$, the low battery icon will show continuously. The Electronic Torque Wrench will not function correctly. Immediately replace the batteries.

## CHANGING BATTERIES

1. UseAA(Alkaline) Batteries only.
2. Remove Batteriesifthe torque wrenchis not usedfor anextended period oftime.
3. Unscrew the end cap.
4. Insert two AA (Alkaline) Batteries (Positive end first).
5. Replace the end cap. The wrench will beep once if installed correctly.

## OPERATION

## HOWTO APPLYTORQUE

1. This Electronic Torque Wrench is designedso that whenforce is properly applied to the handgrip, a continuous audible signal, the LCD screen display andvibration inthe handle will indicatethatthe Target Torque or Angle has been attained. DO NOT pull beyond this point.

CAUTION: The audible signal, LCD screen display and vibration in the handle are indicators that the proper torque or angle has been attained. Over torquing beyond these signals could cause fastener failure.
2. Toproperly apply torque, attach the socketsecurely on the torque wrench square drive and position the socket on the fastenersothat tilting will not occur. Graspthe center of the hand grip and apply aslow steady increasing force perpendicular ( 90 degrees) to the torque wrench body and perpendicular ( 90 degrees) to the center line of the square drive, socket and fastener.
3. Turnthe fastener down with a smooth and even force applied to the handle ofthe torque wrench. As turning resistance increases, pull more slowly. To assure accuracy, the fastener mustbe in motion whenthe torque measurement is made.

## MAXIMUM CAPACITY EXCEEDED

1. When the applied torque exceeds the wrench full-scale capacity the LCD screen will show red and display "ovEr".
2. Verifythecalibration ofthewrenchifyouknow its capacity has been exceeded.

## EXTENSIONS

1. Whenitis necessary to use an extensionthatchanges the effective leverlength of the torque wrench, torque being applied will change.
Compute adjustments as follows:TW - Torque set on Wrench
TE - Torque applied by the extension to the fastener

2. Apply torqueandrotate the wrenchata constant moderate speed until alertedto stopby the continuous audible signal, the LCD Screen display and handle vibration.

Note:Socketextension barsthat areaxially in line withthe squaredrive do not cause error andneedno adjustment.

## CERTIFICATION

This torque wrench was calibrated priorto shipment fromthe factory withintolerance limits of:

- Torque:+/-2\%Clockwise(Right handed) +/-3\% CounterClockwise (Left Handed) from 20\% to 100\% of capacity
- Angle: (+/- $1 \%$ of reading) + (+/- 1 degree @ angular velocity > 10 degree/sec < 180 degree/sec) + (+/- 1 degree of testfixture)
