

Garage Door Insulation Instructions

Please read and follow all the steps below to ensure proper installation.

Products Suggested:

• Garage Door Insulation Kit

- ✓ 1roll - Insulation (2'x80')
- ✓ 100pcs. - Double Sided Tape (1"x2")
- ✓ 1pc. - Aluminum Foil Tape (2"x30')

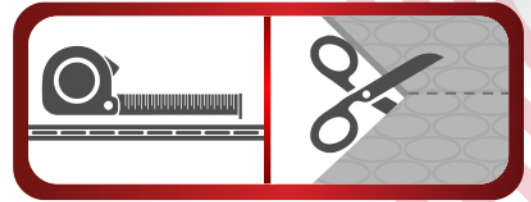

Materials Needed:

- Tape Measure
- Utility knife or scissors

General Instructions:

1. Count and measure all the door panels and cut the reflective insulation roll to fit each of your panels.

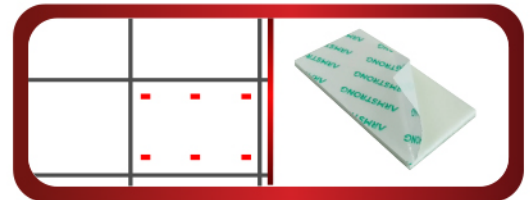

2. Clean the indoor surfaces of the garage door panels with water and/or alcohol to remove any grease or grime to ensure the panels stick well once installed.

NOTE: If you use any other cleaner, make sure to go back over it with water and/or alcohol to remove residue that some cleaners tend to leave on surfaces.

3. Peel off the backing of an included 1-inch by 2-inch double-sided foam piece and adhere one to each corner of each door panel surface.

4. Peel off the remaining backings to expose the sticky surface and position each reflective insulation door panel piece into place and press firmly against the adhesive pieces.

5. Use the included reflective tape as necessary to secure as you see fit.
