

AP-Aurora APEX

- Space saving technology - need 6" space from wall
- Body S-tracking massage function

**New Upgrade - Speakers & Arm Material**  
Aurora is upgraded with a durable spandex in the arm massager to invigorate the senses as the air bags compress the tops and bottom of the forearm and hands.

**L-Track Technology**

The Apex Aurora is designed with all the latest features including the "L" Track massage. This feature has been engineered so that the back-massager rolls past the hips to the hamstrings. Rollers in this track start at the neck and follows the full extension through the buttocks.

**Zero Gravity**

Inspired by NASA technology, the Zero Gravity position is the perfect position for ultimate relaxation. When placed in the Zero Gravity position, the complete weight of your back is virtually supported by the backrest. This helps with maximizing the intensity of the massage. The first stage of Zero Gravity puts the body in the ultimate relaxation position. Whereas the 2nd stage reclines further to place your legs above the heart for optimal circulation.

**Advanced Air Massage Technology**

The Apex-Aurora has been engineered with the latest air massage technology. Through innovative engineering, we have reduced the total number of air bags while increasing the volume and surface area of the massage. By doing so, the total number of working valves has drastically decreased from prior models, which ultimately puts less stress on the chair and making it one of the most mechanically sound massage chairs in the market.

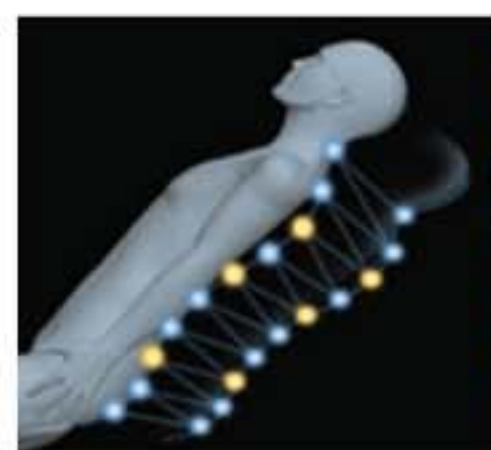

Air Bag Position	Air Bag Quantity
Shoulder	2 pcs
Side Seat	4pcs
Arm & Hand	8 pcs
Thigh	0 pcs
Seat	0 pcs
Calves	4 pcs
Feet	4 pcs

**Total 22 Air Bags 22**

**Arm and Hand Massage**

Multiple air bags apply a deep massage to the forearms and wrists. With air bags inflating and deflating along the top and bottom it mimics hands squeezing the arms.

**Computer Body Scan**

The newly designed Apex Aurora is built on an S-track rolling technology so that the roller heads can provide a more consistent pressurized massage throughout the back. Traditionally massage chairs have been designed to move in a linear motion. The curving track system allows the rollers to focus on the neck, shoulder and lumbar areas with greater consistency. The computer body scan will run a 15 second analysis prior to starting your massage. The chair will figure out where your shoulders start and then begin its customized massage.

**Lower Back Heat**

Placed in the lower back region of the chair are 2 heating pads that enhance the massage experience. Simply press the heat button on the remote and enjoy the gentle heat radiating as the roller heads massage away!

**Shoulder Air Massage**

It grabs the ankles by inflating the foot area and then gently reclines back and forth. The calf and foot massager is capable of making adjustments according to each individual's leg length ensuring that the massage air bags are concentrating on the correct areas.

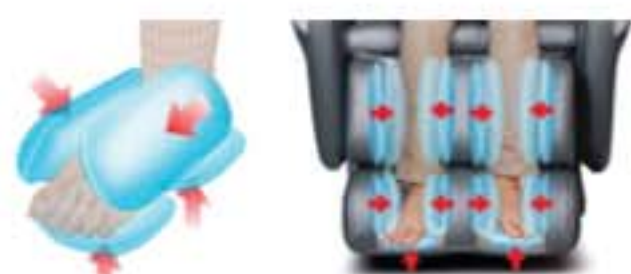

**Leg Extension for the Tall Person**

Between the calf and the foot massager is a steel track which allows you to push down on the feet to extend the length of the leg massager. It's spring loaded and will automatically retract once all pressure is removed. This model can handle a body frame up to 6'2", and a maximum weight capacity of 230 lbs. When getting out of the chair, be sure to wait till the foot rest is all the way down to avoid damaging the motors.

**Foot & Calf Massage**

There are multiple air bags along the sides and back of the legs and feet which inflate to apply a compression massage. Located along the bottom foot massager are spinning rollers that apply a concentrated pin-point kneading massage.

**Product Specification**

Product Name	Apex AP - Aurora
Model No.	AP- Aurora
Rated Voltage	110-120V
Rated Frequency	50/60 Hz
Main Body Dimension	49L x 29.5W x 32H(inch)
Armrest	40L x 16.5W x 30H(inch)
Gross Weight	270 lbs
Auto Timer	10-20 minutes
