

Installation Guide

Turn off the main water supply before installation to avoid water leakage. Prepare the installation area and confirm the two-hole mounting position on the wall according to the faucet size. Install the mounting base and fixing parts on the reserved wall holes, and connect the hot and cold water supply pipes to the corresponding inlet ports of the faucet. Fix the double-handle faucet body firmly to the wall and adjust the horizontal position to keep it stable. Install the waterfall spout and ensure all connections are tightened properly. Turn on the water supply, check for leaks at each joint, and test the water flow and temperature control by operating the double handles. Adjust the faucet position if needed to ensure normal waterfall outflow and smooth handle control.

Specification

This is a modern wall-mounted waterfall sink faucet with double handle design, finished in brushed gold. It adopts a two-hole installation structure and is suitable for bathroom lavatory use. The faucet features a single lever control mode for hot and cold water adjustment, delivering a gentle waterfall water flow. Made of durable metal material with a brushed gold surface, it is rust-resistant and matches modern bathroom decor. Designed for wall-mounted installation, providing a clean and tidy look for the bathroom vanity area.
