Product Component Names And Diagrams

Instructions For Use

The first use of the cleaning brush, please use a full charge, if you do not need to use for a long time, please store a full charge, up to 3 months need to charge and discharge once. According to the different textures of the cleaning surface, you can choose different brush head to use with it, as follows.

1. Large flat brush: suitable for cleaning bathroom, kitchen, living room, toilet, window glass and other oil and dirt

2. Small flat brush: suitable for cleaning small flat areas, such as washbasin, kitchen sink, etc.

3. Pointed brush: suitable for cleaning corners, joints, tire grooves, etc. in the kitchen, bathroom, or hoods and other places that are not easy to clean

4. The following brush heads need to be used in combination with the brush head holder

5. Sponge brush: suitable for cleaning tables, chairs, furniture, etc.

6. Fiber brush: suitable for kitchen, stove top, range hoods and other particularly difficult to clean places

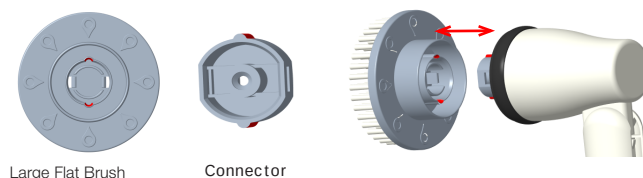

7. cloth brush: for living room floor, glass, coffee table, car surface cleaning and polishing

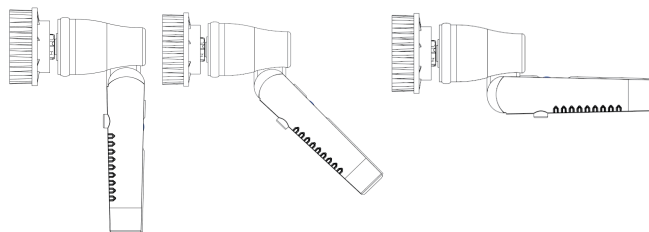

8. Imitation wool brush: applicable For polishing and waxing of high-grade homes, as well as household appliances and car surfaces to remove dust.

Please pay attention to the direction when combining the cleaning brush head with the connecting head

The angle of the cleaning brush head can be adjusted, there are 90° 45° 0° three angles can be Adjustable to adapt to different use environment and space. (The following picture)

In the handheld in the place can not reach, you can add an extension pole, through and The bottom of the fuselage threads screwed tightly after use (the following figure)

Note: brush head in the rotation, may be due to the brush head surface and cleaning surface between the angle between the brush head uneven force, so that the brush head to the left or to the right side of the slide, it is not easy to control the direction, use as far as possible to keep the brush head surface and cleaning surface parallel to each other, so you can effectively avoid the side slip.
