RABBIT SCRAM™

MADE FROM 100% NATURAL INGREDIENTS

GRANULAR REPELLENT

EASY TO APPLY INSTRUCTIONS

Rabbit Scram™ Granular Repellent should be applied as a **protective perimeter barrier strip.**

For individual plants, bushes & small garden/ flower beds (10ft x 15ft): sprinkle liberally in an 18" wide strip surrounding the area to be protected. The initial application should be **heavy enough to visibly** cover the ground. Follow up applications are light. All protective strips should be applied directly **at the edge** of the bed or the drip line of the target plants. Follow this with a light dusting of Rabbit Scram through- out the interior of the protective strip. (For example, around the base of your bush or throughout your garden/flower bed). If you discover a rabbit nest within the targeted area, sprinkle Rabbit Scram liberally around and directly ***into*** the nest.

If you consider yourself to be in a highly aggressive rabbit area, increase the 18" strip to approx. 24" and/or the amount. Also sprinkle Rabbit Scram more heavily throughout the targeted plot.

Rabbit Scram should be applied every 30 to 45 days. It should be reapplied after a very heavy downpour or prolonged period of rain.

FOR organic gardening

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at **epicrepellents.com**
