

Mutual Square 39" Fire Pit

Size: Outside Diameter: 39"x 39"
Inside Diameter: 23"x23"

Piece Count: 12" Caps: 24
Corner Units: 12

Fire pits should only be built over a **non-combustible surface** like concrete patios or a compacted gravel base. Never install a fire pit over a wood deck.

Instructions

1. Prepare the fireplace location by establishing a level **surface** about 45" x 45".

2. Transfer the top layer of the fireplace to desired location. This will become the bottom layer of the fire pit. Note: Transferring one layer at a time before the next layer will help maintain the proper orientation of the corner pieces.

3. Transfer the second layer. Note the 11-inch side of the corner block will now be over the 6.5" side of the corner block beneath.

4. Transfer the third layer.

5. Fill the inside of the fire pit with gravel or base rock a minimum 2 inches deep.
